

Non Core Bluebook

Internships 2025-26

Placement & Internship Cell
INDIAN INSTITUTE OF TECHNOLOGY MADRAS

Message from the team

Greetings pre-final year students!

The following document is the Bluebook which is a compilation of details from the last internship season about various companies and the profiles they offer. The purpose of this document is to help the upcoming batch with valuable knowledge through the feedback of students from last year. The document contains information about job description, various selection processes and the compensation for a particular company. Please note that the information in this document is based on feedback from students and also keep in mind that the process of selection is entirely the choice of company and it can be different from last year.

This particular version encompasses most of the non-core firms that visited us for the 2024-25 season. Every effort has been made to keep the information relevant. Links to video interviews are attached for some profiles.

We would like to conclude by thanking all the students for their cooperation in providing the feedback and the coordinators for their efforts in putting this together. We hope this aids you in your preparation for the upcoming internship season and wish you best of luck for the same.

Regards,
Placement and Internship Team 2025-26

Confidentiality notice: This document is the sole property of IIT Madras. Students are advised to not share any information in the document to any person outside of IIT Madras

2Cents Capital

Profile: Derivatives Analyst (Python-based role; Master DSA, ML, Probability)

Location: Bangalore

Stipend: Around ₹40k – ₹60k

CGPA Criteria: No cutoff

Branch Specification: Open to all branches

Internship Period: Can opt for an internship from May to July or can have a remote internship along with studies as well.

Key Responsibilities of this role :

- Develop and implement alpha-generating strategies for options and derivatives.
- Conduct thorough research and analysis of derivatives markets to identify trading opportunities.
- Build and test quantitative models for options pricing, volatility forecasting, and risk management.
- Collaborate with the broader quant team to integrate derivatives strategies into our multi-asset portfolio.
- Continuously monitor and refine models and strategies based on market conditions and performance metrics.
- Utilize Python for data analysis, model building, and strategy backtesting.
- Present research findings and strategy performance to the investment team.

Qualifications:

- Strong understanding of derivatives, particularly options, and experience in developing trading strategies.
- Proficiency in quantitative analysis and financial modeling.
- Experience with Python programming, especially in the context of financial data analysis and strategy backtesting.
- Familiarity with options pricing models, volatility surfaces, and risk management techniques.
- Ability to work independently and collaboratively within a fast-paced, team-oriented environment.
- Excellent problem-solving skills and a passion for financial markets.

Skills that helped :

- Good understanding of Python

- Understanding of concepts like arrays, linked lists, stacks, queues, binary trees, graphs, hash maps, and basic recursion concepts
- Understanding of mathematics (Probability, Linear Algebra, Differential Equations)
- Understanding of AI/ML
- Understanding of finance (Options, Futures, Derivatives)
- Knowledge of algorithmic trading and financial data science.
- Experience with backtesting platforms and trading simulation tools.
- Strong communication skills, with the ability to clearly articulate complex ideas and results.

Materials and Courses That Help:

- *Options, Futures, and Other Derivatives* by John C. Hull
- Puzzles: Books - Heard on the Street
- Ultimate DSA Sheet
- Striver DSA Sheet
- Courses on:
 - DSA
 - CFA, NRM modules

Round 1 – Technical and Conceptual Assessment (Approx. 45–60 minutes):

- The interviewer will first go through your **resume** in detail. Be prepared for **follow-up questions** on all projects you've mentioned. You are expected to explain your role, key contributions, technologies used, and outcomes.
- This is followed by a **DSA round**, where you'll be asked to solve **two LeetCode-style problems**. These typically focus on:
 - Data structures (e.g., arrays, linked lists, trees)
 - Graphs
 - Dynamic Programming
 You will be expected to explain your logic and approach while coding.
- The round will also include **basic questions based on finance and mathematics**, especially covering concepts like:
 - Options, Futures, and Derivatives
 - Probability and basic statistics
 - Linear Algebra fundamentals
- If you've mentioned **machine learning** on your resume, you can also expect a few **fundamental ML questions**

Round 2 – Practical Implementation Round (Approx. 2 hours):

- In this round, you will be given a **task sheet** that typically involves **designing and implementing a trading strategy**.

- Writing clean, readable, and logical code
- You are **allowed to use the internet** to look up documentation or standard approaches, but **AI tools are strictly prohibited**, and the session will be monitored
- The goal is to evaluate how well you can approach real-world problems using programming and quantitative reasoning. Your thought process, clarity of implementation, and correctness of the trading logic will all be assessed.

AlphaGrep

Profile: Quantitative Researcher Intern

About AlphaGrep:

AlphaGrep is a quantitative trading and investment firm. We research and develop algorithmic trading strategies using advanced mathematical and statistical techniques, and trade them across all asset classes on 30+ exchanges globally. We are leading market makers and amongst the top market participants by volume on several exchanges and products globally.

Job description:

Location: Bangalore, Mumbai, Gurgaon; Duration: 8 Weeks

AlphaGrep Securities seeks a Quantitative Researcher, who will be part of a trading group which executes algorithmic strategies based on market behavior. We cover the global markets by leveraging and integrating technology, risk management and quantitative research. Being a proprietary trading business, we trade our own accounts and have no investors, clients or customers.

- Designing, implementing, and deploying high-frequency trading algorithms
- Exploring trading ideas by analyzing market data and market microstructure for patterns
- Creating tools to analyze data for patterns Contributing to libraries of analytical computations to support market data analysis and trading
- Developing, augmenting, and calibrating exchange simulators

Qualifications:

AlphaGrep encourages bachelor's, and master's students in computer science, mathematics and related fields to apply.

Departments in BTech and Dual Degree eligible for the role are:

- Computer Science and Engineering
- Electrical Engineering

Additional requirements include:

- Familiarity with machine learning (a plus)
- Experience with data analysis, market research and data modeling (a plus)
- Brilliant problem-solving abilities
- Software development experience as demonstrated through course work, research projects, or open source activities, preferably in C++, Python or R/Matlab
- A passion for new technologies and ideas.
- The ability to manage multiple tasks in a fast-paced environment

- Strong communication skills
- A working knowledge of Linux/Unix

Tests:

Number of tests: 1

Number of questions: 5

Time given: 1.5 hours

Description: Was on the moderately harder side. It was almost pure CP questions, and a bit high-rated at that.

Interviews:

Number of interviews: 2

First Round: Asked any of the quant related stuff present in the resume.

Proceeded to ask some questions about how to design a specific thing(JoSAA).

This was offline.

Second Round: Was in an online format. There were 3-4 probability questions. Were manageable in difficulty. They gradually increased in difficulty.

GDs: Not conducted.

Preparation material:

1. DSA sheets
2. For Quant- standard puzzles and references works.
3. CP practice.

Suggestions:

1. Be confident in whatever you say. Even when confused, try communicating with the interviewer. Have an aim of being interactive.

Stipend:

Amount: 500000 INR

Round trip flight tickets and hotel accommodation provided.

Breakfast in the morning

AlphaGrep

Profile: Software Development Intern

About AlphaGrep:

AlphaGrep is a quantitative trading and investment firm. We research and develop algorithmic trading strategies using advanced mathematical and statistical techniques, and trade them across all asset classes on 30+ exchanges globally. We are leading market makers and amongst the top market participants by volume on several exchanges and products globally.

Job description:

Location: Bangalore, Mumbai, Gurgaon; Duration: 8 Weeks

AlphaGrep Securities seeks a Software Development Intern who will be part of our Core Engineering group.

This team designs in-house trading applications which are robust and extremely fast.

- Design, develop and test proprietary software. Examples include:
- Trading strategy simulation software optimized for distributed computation
- Large scale data acquisition, storage, accessibility, and visualization
- Real time trade management and risk analysis
- Identify innovative solutions to complex problems and advocate for their implementation to your team by communicating your ideas in a clear and concise manner
- Collaborate with other software developers, quantitative traders and researchers in cross-functional team environments.

Qualifications:

AlphaGrep encourages bachelor's, and master's students in computer science, mathematics and related fields to apply.

Departments in BTech and Dual Degree eligible for the role are:

- Computer Science and Engineering
- Electrical Engineering

Additional requirements include:

- Excellent Software Development knowledge demonstrated through course work, research projects, or open source activities, preferably in C++

- A strong understanding of in object-oriented design, data structures and algorithms
- Brilliant problem-solving abilities
 - Exposure to network programming (TCP/IP), multi-threaded applications, computational intelligence and real-time programming
- A passion for new technologies and ideas
 - The ability to manage multiple tasks in a fast-paced environment
- Strong communication skills
- A working knowledge of Linux/Unix Financial experience is not required but interest in financial markets is a plus.

Tests:

Number of tests: 1

Number of questions: 5

Time given: 1.5 hours

Description: Was on the moderately harder side. It was almost pure CP questions, and a bit high-rated at that.

Interviews:

Number of rounds: 2 or 3

First round: Was a CP oriented round. 2 to 3 questions were asked. They were of medium difficulty. One of them was an application of "DP on trees". Did not have to code up the solution, but to convey the logic and approach properly.

Second Round: This was based upon C++ fundamentals. Topics like smart pointers, different features and core C++ concepts were touched upon. In case you did not know smart pointers they would explain it you and then ask you to implement it,

Third Round: Was also CP oriented but was a bit on the algorithms side. The questions resembled Leetcode style problems.

GDs: Not conducted.

Points to be noted:

DSA is important to the company but not as much as core C++ concept clarity. This is because during the internship, low latency C++ concepts are being used. They look for people who have a good technical knowledge.

Preparation material:

1. DSA Sheets
2. Going through C++ gfg articles.
3. Effective C++ (a really good book, can learn C++ 11, 14 and for 17 going through articles and such)

Suggestions:

1. Do DSA with a good knowledge in graphs and trees
2. Be strong in the fundamentals of C++
3. Get good at CP

Stipend:

Amount: 500000 INR

Round trip flight tickets and hotel accommodation provided.

Breakfast in the morning

Amazon

Profile: Software Development Engineer Intern.

About Amazon : At Amazon India, we're passionate about creating delightful experiences for our customers. Whether for online shoppers, selling partners, or employees, we innovate every day at Amazon.

As the world's fastest-growing e-commerce market, Amazon India is a place where you can pioneer solutions with real-world impact. We want fresh perspectives that will help us deliver India-specific initiatives for our varied businesses.

We're seeking team members who share our vision and values. You'll have the opportunity to experiment, collaborate with top talent, and innovate the future of Amazon India's customer experience.

Job Description:

Domestic(internship

location-hyderabad,chennai,bangalore,delhi,pune,gurgaon,noida, mumbai), 8 weeks duration May and June.

At Amazon, we hire the best minds in technology to innovate and build on behalf of our customers. The intense focus we have on our customers is why we are one of the world's most beloved brands – customer obsession is part of our company DNA. Our interns write real software and collaborate with a select group of experienced software development engineers (SDEs) who guide interns on projects that matter to our customers. As an intern, you will be matched to a manager and a mentor. You will have the opportunity to influence the evolution of Amazon technology and lead mission critical projects early in your career. Your design, code, and raw smarts will contribute to solving some of the most complex technical challenges in the areas of distributed systems, data mining, automation, optimization, scalability, and security – just to name a few. In addition to working on an impactful project, you will have the opportunity to engage with Amazonians for both personal and professional development, expand your network, and participate in activities with other interns throughout your internship. No matter the location of your internship, we give you the tools to own your project and learn in a real-world setting. Many of our technologies overlap, and you would be hard pressed to find a team that is not using Amazon Web Services (AWS), touching the catalogue, or iterating services to better personalize for customers.

Eligibility criteria :

- Currently enrolled in a Bachelor's or Master's Degree in Computer Science, Computer Engineering, or related field at time of application
- Familiarity with the syntax of languages such as Java, C/C++ or Python.
- Knowledge of Computer Science fundamentals such as object-oriented design, algorithm design, data structures, problem solving, and complexity analysis.
- Communicate effectively to surface progress, risks and help needed within the project team.

Preferred Qualifications:

- Previous technical internship(s).
- Experience with distributed, multi-tiered systems, algorithms, and relational databases.
- Experience in optimization mathematics such as linear programming and nonlinear optimization.
- Effectively articulate technical challenges and solutions.
- Adept at handling ambiguous or undefined problems as well as ability to think abstractly.

Shortlisting Process: Resume shortlist, test, interviews

CGPA Cutoff : 7 above

Test :

Topics : Questions on basic DSA, HR questions are also asked in the test. These questions were the deciding factor in a few cases (a few students who answered them randomly weren't shortlisted for the interviews.)

Test pattern: Coding questions, HR MCQs

GD: No

Interview:

No of interview rounds - 1 technical round

- Easy to medium questions on data structures and algorithms were asked.
- Main concepts asked were trees, linked lists, arrays, etc.
- A few candidates also got questions regarding graphs, hashing and heaps.

Suggestions:

- Just try to be calm. Don't compare yourself with anyone else & don't lie about anything, Be fair.
- Always speak out your thought process and be confident all the time.
- Don't worry much about companies or places of work or stipend. Apply for all companies in your field of interest, do your best in all of them and don't

keep single or specific companies as targets as all companies are good. This will release pressure. Also it is possible that even if you do well , sometimes you might get rejected because of arbitrary tie breaks by some companies which are not in your hands. So just be confident to do your best.

- If stuck, try discussing your thought process with the interviewer, they'll guide you towards the correct approach.

Preparation Material:

- Preparing from leetcode, code chef, code forces, striver sheet etc.
- Basic DSA course from gfg was recommended.
- Solve follow up questions (in Leetcode) to DSA questions in ultimate DSA sheet

Open for:

- Btech: All
- Dual Degree: All

Stipend:

Currency Type : INR

Amount : 110000 Monthly

Other Facilities : No

Relocation allowance : 60k

Food Allowance : Meal allowance - 1100 Rs per month

American Express

Position: Business Analyst Intern

Location: Gurgaon & Bangalore

Internship Duration & Stipend:

Initially offered as a 2-month internship with a stipend of ₹1.5 lakhs per month. Later extended to a 6-month format:

- 2 months onsite with ₹1.5 lakhs/month
- 4 months remote with ₹9,000/month

CGPA Cutoff: Not specified

Eligible Branches: Open to all branches

Stipend: ₹1.5 lakhs/month (for onsite period)

About American Express:

American Express (Amex) is a global financial services company known for its payment card offerings and travel-related services. As a leading issuer of credit cards for individuals, small businesses, and corporations, Amex also provides a range of travel services including traveler's checks, personalized and corporate travel planning, tour packages, and hotel and car rental bookings.

Role Overview:

American Express is more than just a credit card company. We leverage advanced analytics to make data-driven decisions that shape every stage of the customer journey—from acquisition to engagement and beyond. As a Business Analyst Intern, you'll contribute to projects that involve developing models to predict customer acquisition and optimize decision-making across business lines.

Our Risk, Marketing Analytics, Strategy, and Decision Science teams form the analytical backbone of the company, supporting various business units: Consumer, Commercial, Merchant, Network, and Finance. These teams apply cutting-edge data science to drive high-impact business outcomes.

You'll be working in a dynamic, intellectually stimulating environment where you'll gain exposure to real-world business challenges and collaborate with some of the top minds in analytics and machine learning.

Key Areas of Work May Include:

1. **Marketing:** Optimize targeting strategies for customer and merchant acquisition and engagement to maximize ROI.

2. **Underwriting:** Evaluate creditworthiness and design acquisition frameworks that balance growth and risk.
3. **Customer/Merchant Management:** Analyze customer behavior to inform credit, marketing, and service-related decisions.
4. **Fraud Prevention:** Design strategies to detect and prevent fraudulent activity while protecting genuine customer information.
5. **Customer Experience:** Enhance customer interactions by reducing friction and improving satisfaction.
6. **AI Labs:** Develop AI/ML-driven tools and products that enable advanced analytics capabilities across the business.

General Responsibilities:

- Develop a strong understanding of American Express's core business and key decision drivers.
- Analyze business problems using relevant data to extract meaningful insights.
- Translate insights into actionable strategies or develop data science/machine learning models to support business goals.

Skills That Proved Valuable:

- Machine Learning courses
- Python
- SQL
- Excel
- Data Structures and Algorithms (DSA)
- Basics of finance
- Basics of mathematics

Helpful Courses and Resources:

- Ultimate DSA Sheet
- IIT Guwahati's 8–10 week course on Data Science
- Minors in Economics
- GeeksforGeeks
- W3Schools
- MA2040: Probability Course
- Intro to Python (NPTEL/Online Course)
- Probability Prep from BrainStellar

Recruitment Process:

This year's selection process did **not include a test**, unlike the 2023–24 intern cycle. The process consisted of **two interview rounds**:

Round 1: Technical (Approx. 45 minutes)

- Entirely based on the resume and projects.
- Questions focused on machine learning concepts like **decision trees** and **classification algorithms**, along with **basic probability**.
- No coding was asked, but the interviewer emphasized understanding your projects thoroughly—know their logic, motivation, and implementation.
- Some logic-based and reasoning questions were also included.

Round 2: HR (Approx. 20 minutes)

- Be well-versed with **American Express's business model**, and browse their **official website** and **PPTs** beforehand.
- Expect questions such as:
 - *"Why is American Express over its competitors?"*
 - *"How does a credit card company generate revenue?"*

Suggestions:

- Review the **company website** and **PPTs** to understand Amex's operations and market position as a lot of questions were directly asked .
- **Finance-related projects** were particularly appreciated and stood out during interviews.
- **Seek feedback from interviewers** to continuously improve.
- Strong conceptual clarity in **probability**, **ML**, and **project work** will give you an edge.

Appian

Profile: Product Manager Intern

About Appian

Here at Appian, we're passionate about technology. We love making it, and we love using it. Joining Appian Engineering will provide you with the opportunity to learn in an environment that values cross-functional collaboration and is committed to personal and professional growth. We want to revolutionize the way people work, and in doing so, we develop the Appian platform to be simple so our customers can thrive.

Job description:-

Location:- Chennai

Skills required:-

- Skillful prioritization to determine what we should build by collaborating with stakeholders on product vision and strategy
- Effective listening and understanding of customer requirements to create stellar experiences that meet what customers want
- Strong communication, negotiation, and collaboration skills; ability to draw clarity out of complex and ever-changing environments
- Strategic thinking and problem solving with a proven ability to prioritize, negotiate, and execute in order to accomplish amazing things
- Imagination, genuine curiosity for candid feedback, and enthusiastic collaboration for building great product features and experiences

Shortlisting process:- Resume shortlisting, test and interview

CGPA Cutoff:- Not specified

Test:-

Questions asked were:-

- Based on product management
- 1 question was on TAB testing, 1 was probability based situational question.
- Link had 5 questions, 2 were MCQs with multiple correct, 2nd was essay type questions and they ask to write something and they give situations and we have to record a video explaining. All inbuilt

GD:- No

No. of interview rounds:- 2

Interview:-

- In the technical round, questions based on UI and UX were also asked
- Technical questions based on how stakeholders will be affected were also asked
- HR questions like “ If 2 product managers had to collaborate how would you work through it?” were also asked

Preparation materials and suggestions:-

- IITM product case book
- Focus more on resume
- Ask about previous experience in the field
- Connect points in resume to the profile as pitching is important
- Interns can help but prof projects are not helpful
- No coding required
- Knowing how ux ui works also helps in this role even though it was a product management role.
- In situation based questions be confident
- Dig deeper in product management

Eligibility Criteria:

1. All streams of B.E/ B.Tech/ M.E/ M.Tech/ MCA and MSc
2. 10th percentage: 70% and above
3. 12th percentage: 70% and above
4. UG Degree- 70% and above

Stipend:

Currency Type: INR

Stipend Type: Monthly

Amount:- 100000

Other information: NA

Appian

Profile: Software Engineering Intern

Type of Offer :Domestic

Nature of Profile :Software

Type of Internship :Summer

Total Duration :10 (In Weeks)

Mode Of Internship :In-Office

About Appian

Here at Appian, we're passionate about technology. We love making it, and we love using it. Joining Appian Engineering will provide you with the opportunity to learn in an environment that values cross-functional collaboration and is committed to personal and professional growth. We want to revolutionize the way people work, and in doing so, we develop the Appian platform to be simple so our customers can thrive.

Job description:-

Location:- Chennai

Skills required:-

- previous industry software development experience and a passion for technology.
- Motivation to form your own teams, dig into the code, pair programs as needed, collaborate and present your features and proposals to real stakeholders.
- Team-oriented mindset and collaborative approach to delivering solutions. You're also energetic, results and delivery oriented, and have a strong commitment to delivering quality work.
- Fluency in object-oriented programming languages, such as Java & C++

Shortlisting process:- Resume shortlist, Test, Interview

CGPA cutoff:- Not specified

Test

Questions asked:-

- DSA type questions were asked
- Topics like trees and and graphs were asked during the interview and test

GD:- No

No. of interview rounds:- 3

Interview:-

- Technical round had questions around dsa where they were asked to be coded and the approach needed to be explained.
- The next round was DSA resume based where projects and skills were needed to be explained
- Basic HR questions were asked

Preparation material and suggestions:

- Leetcode
- Dsa sheet
- DSA courses in OB
- Tech PORs are helpful
- Don't clone projects, make your own and show enthusiasm in learning.
- AI/ML interest is also preferred
- Decent level comp coding is required, 1300-1400 approx in codeforces
- Projects are important
- No preference in language, use c++ in dsa and ai ml python, they asked for which language we wanted to use, test also had that option

.Eligibility Criteria:

1. All branches of B.Tech and Dual degree
2. 10th percentage: 70% and above
3. 12th percentage: 70% and above
4. UG Degree 70% and above
5. Any other criteria: good communication skills, ideal to have previous internship experience, participated in extracurriculars

Stipend:

Currency Type: INR

Stipend Type: Monthly

Amount:- 100000

Other information: NA

Appian

Profile: User Experience Design Intern

About Appian

Here at Appian, we're passionate about technology. We love making it, and we love using it. Joining Appian Engineering will provide you with the opportunity to learn in an environment that values cross-functional collaboration and is committed to personal and professional growth. We want to revolutionize the way people work, and in doing so, we develop the Appian platform to be simple so our customers can thrive.

Job description:

Location:- Chennai

Skills required:-

- Experience performing user research to understand the unmet needs of customers and stakeholders.
- Proven ability to follow a structured process of research, design, and testing, but also know how to prioritize the most effective activities to support fast-changing business requirements.
- Capability to review the user experience of customers and provide recommendations for improvement.
- Team-oriented mindset and collaborative approach to delivering solutions.
- Previous software and/or agile development experience preferred but not required.

Shortlisting process:- Resume shortlist, tests, interviews (Technical and HR)

CGPA cutoff:- not specified

Test:-

Questions asked were:-

1. Pick 1 project from portfolio and explain design deficiencies and about accessibility in design with how to bring about it
2. One of the questions asked was if you are to design language learning app, what features to put and how would you solve user retention

3. One of the question was how to how to use user experience in a product

GD:- No

No. of interview rounds:-2

Interview:-

- Technical round was based on portfolio submitted
- Basic HR questions were asked like “How would you handle the scenario where your team isn’t participating in the work given?”

Preparation material and suggestions:-

- no solving material specifically
- IITM courses like forms and aesthetics in design-2 and 1 more course under ID bracket
- ED core courses projects
- Reading about design thinking
- No coding required but front end development was appreciated
- PORs like design team in Saarang shaastra and IITM tv are helpful
- Core internship is not really an advantage but projects and internships in ui / ux are important.

Basic qualifications:

- Undergraduate student in a Bachelors program for Human-Computer Interaction, Computer Science, Engineering Design or related field.
- Portfolio of previous design and creative work
- Command over written and spoken English with strong communication skills

Eligibility Criteria:

1. All streams of B.E/ B.Tech/ M.E/ M.Tech, MCA and MSc
2. 10th percentage: 70% and above
3. 12th percentage: 70% and above
4. UG Degree 70% and above
5. While applying for the role, students should submit their portfolio.

Stipend:-

Currency Type :INR

Stipend Type :Monthly

Amount:- 100000

Other information: NA

Atlassian

Profile: Software Engineer Intern

About Atlassian:

From medicine and space travel, to disaster response and pizza deliveries, our products help teams all over the planet advance humanity through the power of software. Our mission is to help unleash the potential of every team. Join Atlassian as an intern and spend your summer with us having a direct impact on how millions of users collaborate and use software. Want the freedom to be creative and build your dreams? How about the time and resources to make them a reality? If yes, Phenomenal! The most amazing problem-solvers like NASA rocket scientists and Tesla engineers are coming to us for solutions. We're in the business of developing software to help teams everywhere get amazing ideas on the ground and into the world. That means we need our own team to push boundaries daily. At Atlassian, you'll be encouraged to use your creativity and try new things. You'll be guided (as we also are) by our core values, and will be supported by some of the best minds in tech. We want you to have everything you need to do amazing work from the get-go.

Job description:

Mode of internship: Remote; Duration: 8 weeks

You love to innovate and to build your dreams. You are ambitious and driven, passionate about the opportunity to work on intriguing and unique challenges. A natural teammate, inquisitive, and enjoys dissecting and tackling hard problems. Whilst passionate about your work and delivering outstanding quality, you're still able to go fast, which means sharp instincts when it comes to the workload and using your time wisely. You'll learn a lot, but you'll also need to be able to stand up for your own ideas when the time comes.

Expectations from the applicants:

- Ability to write clean, efficient code with minimal bugs.
- Real passion for collaborating with colleagues to build technical solutions to hard problems.
- Strong foundation in Computer Science, with interest in industry trends (technology, methods, and tooling)
- Nice to have: experience with Java, Python, JavaScript, or other similar programming language

Departments in BTech for the role are:

- Computer Science and Engineering
- Electrical Engineering
- Engineering Physics

Departments in Dual Degree eligible for the role are:

- Computer Science and Engineering
- Electrical Engineering

CG cutoff: 7+ CGPA

Tests:

Number of tests: 1

Duration: 1.5 hrs

Number of questions: 2 (one was related to graphs, second was related to strings)

Difficulty level: Easy

Interviews:

Number of rounds: 2

Technical round: asked to code a CP question - slightly difficult in terms of implementing and coding it up.

HR round: A normal, genuine talk with the interviewer. It was to know how the applicant tackled difficult and important times in his/her life, and how they manage in some situations. And followed by anything they wanted to ask from the resume - for one it was about the group programming contest that he gave.

GDs: not conducted

Points to be noted:

The company gives priority to well-written code rather than ones with unnecessary or redundant code. Try to code in a clean and simple way. Don't overcomplicate things.

Preparation material:

1. CP Handbook (helped solve the interview question for one person)
2. DSA sheets

Suggestions: Explain your approach effectively, and don't overcomplicate logic for the technical questions asked in the interviews.

Stipend:

Amount: 130000 INR

Stipend: Monthly basis

Bain & Company

Profile: Associate Consultant Intern

Internship duration: 9 weeks

Mode of internship: In-office

Internship Location: Gurgaon/ Mumbai/ Bengaluru

About:

Bain & Company is a global consultancy that helps the world's most ambitious change-makers define the future. Across 65 cities in 40 countries, it works alongside clients to achieve extraordinary results that redefine industries. Its expertise, complemented by a vibrant ecosystem of digital innovators, helps deliver better, faster, and more enduring outcomes. They are committed to investing in organizations that tackle today's pressing challenges in education, racial equity, social justice, economic development, and the environment. The firm holds a gold rating from EcoVadis, putting it in the top 2% of all companies.

Job Description:

The internship provides broad exposure to the consulting industry and teaches business strategy through full- time immersion on a Bain case team

As an Associate Consultant Intern (ACI), you'll begin with a week of intensive training led by our experienced consultants, after which you'll be assigned to an active case. Here is a sample of what you can expect to experience and accomplish: -

- Work on a case team with other consultants, taking charge of a distinct aspect of the project.
- Interview client's customers, competitors, suppliers, and employers.
- Own and identify information sources, gather and interpret data, and execute proper analysis .
- Present your findings to case team members and client stakeholders.
- If you meet our performance expectations, you will receive an offer to return full-time as an associate consultant upon graduating.

Selection Process:

- 1) Mode Of Interview: Hybrid
- 2) Group Discussion: No
- 3) Test Requirements: The test can be taken any time as per the applicant's convenience. One will need a strong internet connection for a smooth experience. Test window will be open for 24 hours during which one takes the test and submit answers. This test is not eliminative in nature.

CGPA cutoff: 8+ typically, 8.5 recommended

Interview process and shortlisting:

1. Resume Shortlisting: Usually look for approx. 2-3 'peaks' in your resume (acads, meritorious exams, research at renowned institutes, research

programs, publications, internships, PoRs, sports, etc), but these criteria are flexible.

2. Cases: 2 rounds usually, maximum of 3 rounds consists of guesstimates probability which tests the candidate's Structured thinking, Problem-solving, Communication, and articulation, Creativity

Prep Material:

Videos:

1. Crafting Cases (to get better at different elements of case solving)
2. Victor Cheng (to get an understanding of frameworks)

Case Books:

1. Case Interviews Cracked (the most helpful thing ever, IITB's casebook)
2. SRCC (useful to get an introductory understanding of different frameworks)
3. ISB casebook (can help you understand different industries better, has a section on it)
4. IIMA (good but usually lil too high level for interviews so only if you have time)
5. IITM Casebook

Suggestions:

1. Once you get an SL, create a case group, usually 3-4 people, and just solve cases together (one person gives the case, one solves it and others take notes on what each could've done better to improve their own case experience and take turns).
2. Have a plan-B if you are targeting consulting, it can be unreliable at times.
3. For girls, keep an eye out for Bain's True North Scholarship.

Open for:

B. Tech – All
Dual Degree – All
Integrated MA – Humanities & Social sciences

Stipend:

Currency Type: INR
Amount: 2.8L – Total duration
Food, Accommodation, and travel allowance to be given as per company policy

Barclays

Profile: BIIC Intern- Quant Mumbai

About Barclays:

Barclays PLC is a British multinational universal bank, headquartered in London, England. Barclays operates as two divisions, Barclays UK and Barclays International, supported by a service company, Barclays Execution Services. Their largest bank is in the UK but are diversified in other countries. They give banking services, investment services, and similar services for big companies.

Job Description:

The role is a diverse role, after you are onboarded, depending on your skillset you will be allotted to a specific project and the work that you are gonna do is going to vary. Depending on your skillset, you might be doing SD or something similar

Shortlisting Process: Came during phase-2.

CGPA Cutoff: NA

Test: The test had 6 sections, on Mathematics, Data Analysis, SQL Based questions, Aptitude and 2 programming questions

GD: NA

No of interview rounds: Three Rounds - First one is technical - Basic Questions - Going through your resume and questions regarding the same
Round 2 - Behavioural and technical, questions like How well do you understand Barclays and stuff, checks your in depth understanding of mathematical and statistical skills, third round was a proper HR

Suggestions:

- More interested in fundamental understanding, problem solving approach
- Just explain your thought process if you don't know the answer, and they will guide you to the correct answer
- You are supposed to keep the answers crisp and not beat around the bush.
- Be good with mathematical skills, no prior knowledge on finance is required
- Coding is very much needed, DSA is the game changer and it will be tested during the interview, be good in one language and don't focus on multiple
- If you aiming quant, be good in python, that's what companies look for
- Certifications like NCFM, CFA, FRM are not mandatory but gives an edge
- Just have fundamentals of finance clear
- An intense domain where companies require people very good at mathematics and programming
- Don't stress too much, check if you are good with your communication skills

Open for:

B Tech - Computer Science Engineering, Electrical Engineering, Mechanical Engineering

Dual Degree - Computer Science and Engineering, Electrical Engineering, Mechanical Engineering, Complex Systems and Dynamics, Computational Engineering, Data Science, Quantitative Finance

Stipend:

Currency Type* : INR

Programs	Amount	Other Information (Food, Accommodation, and Travel Allowance)
B Tech	200000	Travel assistance will be provided
Dual Degree	200000	Travel assistance will be provided

Fundaes

BCG

Profile: Summer Associate

About BCG:

BCG is one of the top 3 management consulting firms in the world. The firm offers creative solutions to a plethora of problems that trouble companies from various sectors. It is a global consulting firm that partners with leaders in business and society to tackle their most important challenges and capture their greatest opportunities. BCG's success depends on a spirit of deep collaboration and a global community of diverse individuals determined to make the world and each other better every day.

Job Description:

- As a Summer Intern, the candidate will work on a case team with talented, supportive BCGers who will help them learn and encourage them to grow.
- They will be challenged to develop firsthand knowledge of clients' critical business issues, building client management, problem-solving, and communications skills. As a case team member, they gain a 360-degree perspective on life as a BCG consultant—from working on client projects to socializing with colleagues etc.
- On joining BCG, Summer Interns undergo an orientation program, which introduces them to the core consulting skills and tools.
- In addition, there is a well-established mentoring process that helps them through their internship.

Shortlisting Process: Resume shortlisting

CGPA Cutoff: No explicit cutoff but 8+ preferable

GD: No

No of interview rounds: 1 to 3

Interview:

- HR questions at the beginning of each round.
- Interviews are mainly based on cases like guesstimate and unconventional cases.
- Unconventional cases are a bit hard.

Preparation Material:

- IITM and IITB Case Book
- SRCC Case Book
- Victor Cheng and Shewtha Srinivasan videos
- IIMA case book
- Quintessential consult stuff
- Buddy cases, YT videos, and consistently practising with your case groups.

Suggestions:

- Start building your resume as early as possible and do not forget to take feedback as it is a very crucial process for consulting jobs.
- You must be able to produce a well-balanced resume that boasts of peaks like good PoRs, and strong extracurriculars and you must also possess the corresponding accolades/ proofs to back your claims. A good CGPA, research papers and/or foreign interns, and good scholarships are also plus factors.
- A PoR in Head or Core positions with quantifiable impact, participation in the conduction of events, extracurriculars and demonstrating good communication and fast thinking would help in getting shortlisted.
- In 1st year explore and try out as many fields as you can.
- In your 2nd year try out different teams in-depth through coordinator roles and ask your prof for a project to do on the side.
- In your 3rd year, put in the effort to lead the team that you are the most invested in by becoming the head and if you are a dual degree student, then do a project with someone outside the institute (foreign or IISC.)
[Overall pursue what interests you and have fun with it.]

Open for: B.Tech: All Branches.
Dual Degree: All Branches.

Stipend: INR 1,50,000 per month.

Cohesity

Profile: Engineering Intern.

About Cohesity : Cohesity is a technology company leading the next era of data security and management. We are on a mission to radically simplify how organizations handle their data to unlock limitless value. We make it easy to back up, manage and derive value from data while protecting data against ransomware attacks. At Cohesity, we're encouraged to think big and we take on dynamic goals that require innovative problem solvers. Obsession with our customers keeps us humble and drives us to keep learning. We've been named a Leader by multiple analyst firms, and are prominently featured in the Forbes Cloud 100 and CRN's Coolest Cloud companies.

Job Description:

Domestic(internship location- Bangalore, Pune), 10 weeks duration

As a Software Engineering Intern, you will be embedded within our software engineering teams as squad members, contributing to the same complex challenges they're focused on. Voted Forbes top 40 hottest startups, you will be working on cutting edge distributed systems technology and building product features that customers will use. We are looking for technically strong and motivated individuals to join our team. You will learn how to develop high quality software and understand the various software development processes to ship successful products.

- You will work alongside your mentor and your team to build product features and solve real problems at massive scale
- You'll be exposed to cutting edge technologies in distributed systems and hyper-converged systems space.
- Be part of our culture and mission in transforming data
- You will deliver impact while deepening your technical skills

Eligibility criteria :

- Actively pursuing Bachelors / Dual Degree in Computer Science or related engineering field.
- Strong programming skills in any: C, C++, or Go ,Java or Angular/JS.
- Competent in Data Structure, Algorithms and Systems Design
- Experience working with some of the following: Unix/Linux environments, distributed or parallel systems, machine learning, asynchronous

programming, networking, developing large software systems, and/or security software development.

- Enjoy solving difficult problems and possess critical thinking abilities.
- Coachable, motivated, and humble
- Ability to demonstrate his/her own projects and achievements
- Willing to take on difficult problems with a positive attitude.

Shortlisting Process: Resume shortlist, test, interviews

CGPA Cutoff : 8 above

Test :

Topics: Questions on basic DSA, 2 questions asked and 1 hour given.

Test pattern: Coding questions..

GD: No

Interview:

No of interview rounds - 1 technical round and 1 HR round

- Easy to medium questions on data structures and algorithms was asked in the first round
- Questions regarding team management and building, achievements, reason why applicant has chosen this company, resume points, strong points and subjects asked. HR round is a differentiating round.

Suggestions:

- Just try to be calm. Don't compare yourself with anyone else & don't lie about anything, Be fair.
- Always speak out your thought process and be confident all the time.
- Don't worry much about companies or places of work or stipend. Apply for all companies in your field of interest, do your best in all of them and don't keep single or specific companies as targets as all companies are good. This will release pressure. Also it is possible that even if you do well, sometimes you might get rejected because of arbitrary tie breaks by some companies which are not in your hands. So just be confident to do your best.
- If stuck, try discussing your thought process with the interviewer, they'll guide you towards the correct approach.

Preparation Material:

- Preparing from leetcode, code chef, code forces, striver sheet etc.
- DSA sheet questions
- Good amount of HR interview prep

Open for:

- Btech: Computer Science
- Dual Degree: Computer Science

Stipend:

Currency Type :	INR
Amount :	120000 Monthly
Other Facilities :	No
Relocation allowance	NO
:	
Food Allowance :	Food vouchers provided

Corridor Technologies

Profile: Full Stack Developer

About Corridor Technologies:

Corridor Platforms, a US-based product firm, is a leading big data decision analytics workflow governance and automation capability designed by banking industry veterans to rapidly transform risk and marketing decisions at banks, enabling them to leverage new data, AI, and automation to create competitive excellence in the age of digitization. The product is a cloud native solution built with a cutting-edge architecture and deploys flexibly on-premise or SaaS for clients.

Role: Full Stack Developer

A Full-Stack Developer at Corridor works on creating a governance centric analytical solution to help data scientists create data pipelines and manage them. The work can range from developing UIs, creating APIs, managing DB schemas, managing async tasks, and writing logic to scale for Big Data - all while writing quality code that is ready for production.

Stipend : 1 lakh per month

CGPA cutoff :No

Skills required:

- Python
- Java Script
- AI-ML
- DSA
- Databases management

Materials that help:

- Courses on DSA
- Ultimate dsa sheet

Recruitment Process:

Screening round (1 - 1.5 hour) :

In internship cycle of 23-24: test was majorly related to theoretical questions on full stack development, DSA, Probability and pattern type questions

But in the 24-25 cycle , it was an Online exam with two questions which were different for many . There was some based on dsa (easy enough to be able to be

answered in an interview) and some based on greedy algorithm or graph and some based on dynamic programming

Interview process:

1. Round 1 : Focused on projects that the students have worked on .
2. Round 2 : Specifics into what they worked on ,(eg: Web Hosting)and asked for improvements on specific parts
3. Round 3 : HR round

Suggestions:

- Have a thorough understanding of every project mentioned in your resume. Try to upskill yourself by developing projects on your own, Be confident in any region which you are strong in
- Since the role was for full stack development, having a resume with full stack development projects was a great plus point
- Having tech PORs related to web development also was a plus point

Danone

Job Designation Offered: Operations Intern

Type of Offer: Domestic

Type of Internship: Summer

Total Duration: 8 (In Weeks)

Mode Of Internship: In-Office

Internship Location: Lalru (Chandigarh)

Deutsche India Pvt Ltd

Profile: Intern Analyst

Type of Offer: Domestic

Nature of Profile: Software

Type of Internship: Summer

Total Duration :8 (In Weeks)

Mode Of Internship: In-Office

Internship Location: Pune/Bangalore

About:

Deutsche India Private Limited (DIPL) is a subsidiary of the Deutsche Bank Group, operating as a Non-Banking Finance Institution (NBFI) in India. It primarily focuses on providing financial services to high net-worth individuals and corporations, including loans and portfolio management services.

Job description:

About the Programme: A structured internship designed to develop your skills through training, real-world projects, and networking. You'll gain hands-on experience and support from colleagues across the business.

About the Division: Technology is at the core of Deutsche Bank's strategy. The TDI division is driving innovation by enhancing engineering capabilities, adopting agile methodologies, and modernizing IT through cloud and long-term investments. We aim to hire and empower visionary tech talent.

Role Overview: As a Technology Intern, you'll contribute to developing and delivering tech solutions that reduce complexity, manage risk, and enable business growth. The programme includes job rotations, seminars, and skill development initiatives to prepare you for a tech career in banking.

What We Look For:

- Strong understanding of software engineering (SDLC, algorithms, data structures, OOP, databases, testing)
- Proficient in coding and problem-solving
- Self-motivated with good communication and teamwork skills
- No active backlogs at time of joining

Benefits & Culture: Deutsche Bank supports employee wellbeing and values diversity, inclusion, and flexible work. We foster a respectful, high-performance culture where everyone can grow.

CGPA cutoff: N-A

GD: No

Tests/ Interview process:

Test: Consisted three DSA questions apart from a few MCQ's, Categorised as Easy, medium, and hard, solving two questions was enough to get shortlisted.

Interview

- Consisted of three rounds
- The nature of the rounds varied between candidates i.e. some had all technical some had all HR
- Example of an interview is as follows:

Round 1: Technical Interview

DBMS:

Concepts of joins and types of joins

Scenario-based question involving Student–Department–Marks tables:

Asked to find aggregate of department marks

DSA:

Explained Linked Lists and provided a real-life example

Scenario: In a library with categories like fiction, nonfiction, and biography — asked to choose a suitable data structure for counting books **Answer:**

HashMap

Resume Discussion

Questions based on projects and experience mentioned

Round 2: Analytical & Behavioural Round

Case Scenario:

Asked to approach work distribution as a product manager

Situation-based: What would you do if a task is urgent but unclear

Aptitude & Logical Reasoning:

Pattern recognition: Complete the series → 1, 4, 9, 16, 25

Answer: 36 (perfect squares)

Math question:

- A shopkeeper offers 10% discount on printed price but earns 25% profit
- Find the ratio of printed price to selling price

Resume Discussion:

- Further questions around projects and experiences

Round 3: HR/Managerial Round

- Personal & Motivational:
- Discussion on family background
- Self-introduction using points from the resume
- Why do you want to join Deutsche Bank
- Question: How old is Deutsche Bank?

Open to:

Undergraduate

DevRev

Profile: Member of technical staff intern

About DevRev : People are at the core of DevRev. We are eager to invest in your potential to create the future of software development together. If you have a deep passion for building and a relentless pursuit for perfection, you are one of us. We provide 100% health-premium coverage for you and your family. We also encourage you to take paid time off to promote your well-being and mental health. We are eager to invest in your potential to create the future of software development together. If you have a deep passion for building and a relentless pursuit for perfection, you are one of us. We believe that ongoing learning and development are critical to growth and success. We offer a unique set of DevRev learning modules and also partner with leading regional universities and online learning platforms. We are a global company with offices in North America, Europe, and Asia. Our people have the flexibility of working from one of our global locations, including from the comfort of their homes from time to time. This is why our team is committed to creating long-term value without the worry of near-term gyrations.

Job Description:

Domestic (internship location-IIT Madras Research Park, Bangalore, Chennai), 10 weeks duration.

We are looking for ambitious and authentic software developer Intern who are excited to bring fresh ideas from all areas to their work, including artificial intelligence, natural language processing, UI design, mobile, information retrieval, distributed computing, large-scale system design, networking and data storage, security, and more. As a software developer Intern at DevRev, you will have the opportunity to build things that truly matter and to work with a thriving global team.

Eligibility criteria :

- Currently pursuing a Bachelor's degree in Computer Science or related technical field
- Software development experience coding in a general-purpose programming language
- Examples of coding in one or more of the following programming languages: C, C++, Java, JavaScript, Golang, or Python
- Experience working with data Structures or algorithms (i.e., data structures /algorithms class, coursework/projects, research, internships, or other

practical experience in/outside of school or work (including open source hobby coding)

Preferred Qualifications:

- Experience programming with two or more of the following languages: C, C++, Java, JavaScript, Golang, or Python
- Experience working one or more of the following: web or mobile application development, Unix/Linux environments, distributed and parallel systems, machine learning, information retrieval, natural language processing, networking, developing large software systems, and/or security software development.
- Interest and ability to learn other coding languages

Shortlisting Process: Resume shortlist, test, interviews

CGPA Cutoff : -

Test :

Topics: Questions on basic DSA,

Test pattern: Coding

GD: -

Interview:

No of interview rounds - 2 technical rounds

- First interview had DSA questions. They were from medium level DSA questions to algorithm heavy questions.
- Path algorithms given, a maze (traversable tiles and walls) asked, applicants were expected to code a few parts and explain the algos in detail.
- Questions related to tree traversal, sliding window questions, etc, were asked
- Most applicants reported DSA questions being asked. An instance of question on query synchronization and parallelization being asked in the 2nd round of interview was reported.

Suggestions:

- Just try to be calm. Don't compare yourself with anyone else & don't lie about anything, Be fair.
- Always speak out your thought process and be confident all the time.
- Don't worry much about companies or places of work or stipends. Apply to all companies in your field of interest, do your best in all of them and don't keep single or specific companies as targets as all companies are good. This will release pressure. Also it is possible that even if you do well , sometimes you might get rejected because of arbitrary tie breaks by some companies which are not in your hands. So just be confident to do your best.

- If stuck, try discussing your thought process with the interviewer, they'll guide you towards the correct approach.

Preparation Material:

- Preparing from leetcode, code chef, code forces, striver sheet etc.
- Basic DSA questions from the sheet provided.

Open for:

- Btech: Computer science and Electrical Engineering
- Dual Degree: Computer science and Electrical Engineering

Stipend:

Currency Type :	INR
Amount :	100000 Monthly
Other Facilities :	No
Relocation allowance	1 Week free accommodation provided
:	
Transport allowance:	Free cab
Food Allowance :	Free food

D. E. Shaw India Private Limited

Profile: Software Engineering

Type of Offer: Domestic

Type of Internship: Summer

Total Duration: 8 (In Weeks)

Mode Of Internship: In-office

Internship Location: Hyderabad / Bengaluru / Gurugram (final allocation will be based on business requirement)

About:

The D. E. Shaw Group is a global investment and technology development firm known for its pioneering work in quantitative investing, while also leveraging fundamental analysis and portfolio manager discretion. Founded in 1988 with six employees and \$28 million over a New York City bookstore, the firm has grown to over 1,900 people worldwide. It seeks unique, hard-to-find sources of return using both quantitative and qualitative methods across global public and private markets. Despite its evolution into a sophisticated, institutional-grade operation, it maintains a culture of creativity, innovation, and discovery. The information provided is for informational purposes only and not investment advice, and there is no assurance that past activities or results will continue

Job Description:

Technology is at the core of everything we do. Interns at the D. E. Shaw Group work with some of the most advanced computing resources in the world, contributing to high-impact projects across:

- Diversified investment strategies
- Trading systems and portfolio platforms
- Quantitative analysis and visualization tools
- Low-latency infrastructure and middleware systems
- Internal efficiency tools, including those for talent operations

Internship Exposure:

As a technology intern, you will gain:

- Insight into the financial domain

- End-to-end exposure to trading systems, including building core components
- Experience in developing scalable, real-time software
- Opportunities to enhance data analysis libraries and build interactive visualization tools

Who we're looking for:

We are looking for students who are passionate about technology and problem-solving. The ideal candidate should:

- Be a pre-final year student
- Have a minimum CGPA of 7.00 (Computer Science branches) or 8.00 (all other branches), with no current backlogs
- Be proficient in programming with C/C++/Java/Python
- Have a strong grasp of core CS concepts:
 - Data Structures & Algorithms
 - Operating Systems
 - Computer Networks
 - Database Management Systems
- Demonstrate strong logical reasoning and problem-solving skills

Shortlisting Process: Online test for 1.35 hours and resume shortlisting

CGPA Cutoff: 7 for CS, 8 non-CS

Test: Mainly focussed on DSA and OOPs, specific focus on DP and special tree data structures like segment tree. 3 coding questions were asked and there were separate time limits for each question. (2 questions from dynamic programming)

GD: No

No of interview rounds: 2

Round 1:

- OOP (virtual functions, virtual pointer, virtual table)
- 1 question based on stacks
- 1 question based on heaps
- Questions based on linked list and time complexities as well

Round 2:

- HR questions from Resume
- Write a class for a ludo game

Suggestions:

- For coding questions, the focus seemed to be on finding the best data structure. Further refining of the algorithm is good but they are usually satisfied with a good choice of data structures; Standard OOP questions.
- Think out loud during interview
- Do not mention something you are not confident in your resume

Preparation Material:

- o Geeks for Geeks Interview questions
- o CS2810 helped in OOPs
- o Leetcode for DSA

Open for:**Undergraduate Degree**

B. Tech-All

Dual Degree-All

Post Graduate Degree

MTech / M.S: All

M.Sc. : All

Stipend:

- o Currency Type: INR
- o Amount: 200000 Monthly
- o Other Facilities: Insurance Coverage
- o Accommodation: Company paid accommodation for the entire duration
- o Travel Allowance: To and fro domestic air fare (Up to 15,000 on actuals)

Dynamic Technology Lab Pte. Ltd.

Profile : Quantitative Research Intern

About Dynamic Technology Lab Pte. Ltd. :

Their diverse team, with varied cultural and academic backgrounds—including computer science, finance, and engineering—helps us tackle complex, cross-domain challenges. They are building proprietary systems, leveraging advanced technologies like AI, and maintaining robust infrastructure. Their world-class talent includes international Olympiad medallists and top programming competitors.

Job Description:

The role primarily involves working with stock exchanges, developing algorithms for trading on them. This requires a strong foundation in mathematics and data analysis, as well as proficiency in coding to implement and optimize these strategies.

Shortlisting Process: Test followed by interviews

CGPA Cutoff: People applying for SDE had no CG cutoff, people applying for quant, there was a cg criteria, like either >9.5 or the top 10 people
Branch Changers were also shortlisted

Test: Pen and paper style test, questions were displayed on a screen in a classroom and students were asked to write the answers on a paper. Questions were of Olympiad level mathematics and coding skills and financial knowledge were not tested.

GD: NA

No of interview rounds: 1

Suggestions:

- For preparation, be thorough with probability and statistics, Brainstellar and Heard in the Street are some good sources
- Go through PRMO and IOQM questions as well
- Maintain proper cg as well

Eightfold.ai

Profile: Engineering Intern

About Eightfold.ai:

Eightfold was founded with a vision to solve for employment in our society. For decades, the connection between individuals and opportunities has been based on who the individuals are and the strength of their network, vs. their potential. Eightfold leverages artificial intelligence to transform how to think about skills and capabilities for individuals as well as how jobs and career decisions are made. Eightfold offers the industry's first AI-powered Talent Intelligence Platform to transform how organizations plan, hire, develop and retain a diverse workforce, enabling individuals to transform their career. If you are passionate about solving one of the most fundamental challenges of our society - employment, working on hard business problems and being part of an amazing growth story - Eightfold is the place to be!

Job description:

Location: Bangalore, Noida; Duration: 12 weeks

As an Engineering Intern at Eightfold AI, you will get a chance to work on highly scalable distributed systems and AI platforms spanning several TBs of data from enterprises, governments and public data sources. With candidate and job data in the order of millions, our models are trained on aggregation of a billion data points and our infrastructure is built to scale state of art. You will gain deep expertise in how AI is consumed and create futuristic applications that are effective in using AI/ML to find the right career. You will also optimize for usability and make data driven decisions in the process.

Departments in BTech and Dual Degree eligible for the role are:

- Computer Science and Engineering
- Electrical Engineering

Responsibilities:

- Learn to design, develop, maintain, and enhance applications and services.
- Invent novel solutions to challenging problems.
- Diagnose and debug issues in a production environment.
- Collaborate with top notch engineers, product managers and designers in an open, creative environment.

Preferred:

Have cross-platform software development experience (Web, Android, iOS, emails).

CG Cutoff: 8+ CGPA

Tests:

Number of tests: 1

Number of questions: 2

Description: Questions were on DSA, and were of a moderate - hard difficulty level of leetcode problems.

Interviews:

Number of interviews: 3 (2 Technical and 1 HR)

First round: one DSA question in 4-50 minutes time limit. One had a hard Leetcode level problem, the other had a relatively simpler one(a modified implementation of binary search)

Second round: one DSA question in 4-50 minutes time limit. The questions were on the difficulty level as of the medium level questions in Leetcode. (one question was -building of a binary tree and then implementing a boundary traversal of the binary tree)

Third round: This was a HR round. Completely chill round, no preparation required. Was just discussing the different domains present, and asking if they were aware of it.

Preparation material:

1. DSA Sheets (ultimate sheet, and A2Z striver)

Stipend:

Amount: 150000

30000 relocation allowance

Finmechanics

Profile: Associate Consultant (Internship)

Location: Mumbai

Stipend: ₹1.30 lakh/month

CGPA Cut-off: None

Branches: Open to all branches

About:

FinMechanics provides consulting services and technology solutions to Financial Markets and Risk Departments of banks and financial institutions. We work on all the areas of Financial Markets starting from Derivatives and Vanilla instrument Pricing, Position Keeping, Market data, Trading and Order management capabilities, RiskManagement, Trade Processing, Settlement and Accounting. In the Enterprise Risk space, our Subject Matter Experts help risk departments evaluate Value at Risk, perform Asset Liability Management and set up Limit Monitoring frameworks for market, credit and trading risks. In the consulting space, we have a deep understanding of leading Treasury solutions and pricing libraries. In the last 17 years, we have worked with Global and Regional Financial Institutions in Asia Pacific and UAE.

Job Description

- Solve Problems and provide Solutions to Financial Markets and Risk Departments of Financial Institutions.
- Design and develop Applications with rich functional content for Financial Markets, and Risk Divisions.
- Implement Projects focused on software solutions popular in the Financial Services Industry, specifically treasury (e.g. FM Converge, FM Connect).
- Continuously build knowledge on Financial Markets, Instruments, Models, Risk Management, Operations and Technology.
- Re-engineer processes to achieve best-in-class standards.

The role of an Associate Consultant at Finmechanics primarily involves understanding client needs and recommending optimal financial models based on prevailing market conditions. For interns, the work is more tech-focused, involving the development of software and tools related to quantitative finance. The company is looking for students with strong skills in development, mathematics, and finance.

Skills That Helped:

- DSA and Python programming
- AI/ML fundamentals
- Basic understanding of finance
- Solid foundation in mathematics

Study Materials That Were Useful:

- DSA playlists on YouTube
- MA2040 Probability Course
- Brainstellar's probability courses
- Basics of Finance (online resources)
- Ultimate DSA Sheet
- Mathematical Finance courses

Skills Gained:

- In-depth understanding of finance
- Exposure to the intersection of tech and finance
- Hands-on training sessions provided by the company

Recruitment Process:

1. Test:

- Format: Pen-and-paper MCQ test with ~50 questions
- Sections: Tech, Finance, Math
- Topics: Statistics, Calculus, DSA, OOPs, Java, SQL, Probability, Aptitude, Finance (including comprehension-based questions)
- Note: There was negative marking. Brainstellar was especially helpful in preparation.

2. Interview Rounds:

- **Round 1 (20–25 mins):**
Focused on probability, mathematics, finance, and tech. Basic probability questions were asked, along with DSA questions focusing on logic and approach. Be prepared to explain your resume and the algorithms used in your projects thoroughly. They assess your grasp of concepts and logical thinking skills.
- **Round 2 (20–25 mins):**
This round involved a panel of about 15 people, divided into three sectors: finance, consulting, and tech.
You're encouraged to steer the interview toward your strength—whether it's consulting, finance, or tech.

- For **consulting**, positions of responsibility (PoRs) were important. Interviewers enquired about contributions in these roles, and strong PoRs helped build credibility, especially for those interested in product management or consulting.
- For **tech-focused candidates**, projects and development experience were key discussion points.

Reviewing product decks (e.g., from Flipkart) was also helpful in preparing for product-related conversations.

The purpose of this intense panel was to test your calmness and clarity under pressure. Good communication skills were essential.

Suggestions:

- Having prior internships in product management helped demonstrate interest and skills in both product and finance.
- Confidence, speed, and accuracy were important. Avoid bluffing—focus on your strengths and genuine interest in the role.
- Projects in finance and tech added value and relevance.
- Clarify what profile you're targeting early on—whether it's quant, finance, or consulting—and tailor your preparation accordingly.
- Begin prep during the summer break, and regularly practice problem-solving and puzzles to build speed and logical thinking.

Fractal Analytics

Profile: Project Intern - AI Research Scientist

About Fractal Analytics:

Fractal is one of the most prominent providers of Artificial Intelligence to Fortune 500® companies. Fractal's vision is to power every human decision in the enterprise, and bring AI, engineering, and design to help the world's most admired companies. Fractal's businesses include Crux Intelligence (AI driven business intelligence), Eugenie.ai (AI for sustainability), Asper.ai (AI for revenue growth management) and Senseforth.ai (conversational AI for sales and customer service). Fractal incubated Qure.ai, a leading player in healthcare AI for detecting Tuberculosis and Lung cancer. Fractal currently has 4000+ employees across 16 global locations, including the United States, UK, Ukraine, India, Singapore, and Australia. Fractal has been recognized as 'Great Workplace' and 'India's Best Workplaces for Women' in the top 100 (large) category by The Great Place to Work® Institute; featured as a leader in Customer Analytics Service Providers Wave™ 2021, Computer Vision Consultancies Wave™ 2020 & Specialized Insights Service Providers Wave™ 2020 by Forrester Research Inc., a leader in Analytics & AI Services Specialists Peak Matrix 2022 by Everest Group and recognized as an 'Honorable Vendor' in 2022 Magic Quadrant™ for data & analytics by Gartner Inc. For more information, visit fractal.ai

Fractal's businesses have been involved in multiple areas of A.I. research for the past several years and we have recently set up an A.I. Research Lab to focus on the most important problems in A.I. The A.I. Research Lab has worked extensively on the Foundation Model /GenAI ecosystem across a wide variety of areas. The team has helped build in-house foundation (diffusion) models, has extensively worked on Large Language Model innovations and has built various aspects of Agentic systems that can lead to AGI. The team has access to inhouse GPU-cluster farm along with cloud GPU resources for solving complex A.I. problems. The A.I. Research Lab will focus on foundational aspects of A.I. research that pushes the boundaries of what is possible and moves us towards a world with safe and effective AGI.

Job Description:

Work alongside researchers, engineers, and data scientists on cutting-edge AI problems in vision, language, audio, and multimodal learning. This internship focuses on designing scalable AI/ML solutions — especially in areas like domain-based LLM fine-tuning, text-to-image generation, multi-modal models,

and agentic systems. Interns are expected to explore new techniques while balancing model performance, inference speed, and resource efficiency.

You'll be joining a collaborative team contributing to real-world AI-driven products, with a strong emphasis on research, experimentation, and deployment.

Location: Mumbai

Responsibilities include:

- Researching latest developments in Machine Vision, NLP, Deep Learning, RL, and agentic AI.
- Developing novel algorithms and scalable model architectures (e.g., LLMs, Diffusion models, SAM, RLHF).
- Building engineering pipelines to take models from prototype to production scale.
- Contributing to technical documentation, internal blogs, or research publications.
- Collaborating with engineering teams for deployment and business teams for applied use

Good-to-have skills:

- Strong background in Deep Learning (PyTorch, Python).
- Experience with generative models (diffusion, attention-based models, LLMs).
- Familiarity with RL, prompt tuning, or instruction tuning.
- GPU-enabled model training and fine-tuning.
- Strong fundamentals in ML theory, ability to write custom models.
- Open-source contributions, blogs, or research publications (preferred).
- Ownership mindset, creative thinking, and collaboration skills.
- Mathematics, especially Probability and Statistics.

Shortlisting Process: Online Test, 2 rounds of Interviews

CGPA Cutoff : 8+ (for non-circuit branches)

Test : Data Science and advanced DSA

GD: No.

No of interview rounds - 2

Interview:

Two rounds, Tech and HR.

Round 1:

- Tech: Fast and in depth about AI and past research experience.

Round 2:

- HR: behavioural.

Suggestions:

- AI will be tested in depth, different questions will be asked, so be thorough with it.
- Be quick during the interview and make concrete points.

Eligibility:

- UG, Btech: All

Stipend:

Currency Type : INR

Amount : 100000 Monthly

Other Facilities : No

Travel: No

Food Allowance: No

Goldman Sachs

Profile: Summer Analyst

Type of Offer: Domestic

Type of Internship: Summer

Total Duration :10 (In Weeks)

Mode Of Internship: In-Office

Internship Location: Bengaluru/ Hyderabad

About:

The Goldman Sachs Group, Inc. is a leading global investment banking, securities and investment management firm that provides a wide range of financial services to a substantial and diversified client base that includes corporations, financial institutions, governments, and individuals.

Job Description:

Quantitative & Technical Engineering – Role Overview

Quantitative and technical engineers play a critical role at the core of the business, tackling real-world financial and technical challenges using advanced analytical methods. Working in close collaboration with traders, bankers, and portfolio managers, they help drive key business decisions through innovative quantitative perspectives.

Key Responsibilities

As a team member, you will:

- Use your skills in mathematics, programming, and logical reasoning to develop models that power decisions in global financial markets.
- Conduct research and analysis to build solutions in a fast-paced, data-driven environment.
- Bring fresh ideas from diverse academic and technical backgrounds

Training & Impact

- Receive in-depth training from firm-wide experts in quantitative finance and financial markets.
- Tackle dynamic challenges, including:
 - Alpha-generating strategies
 - Portfolio allocation
 - Model development for prediction, pricing, automation, and data analysis
 - Contribute to high-impact work that directly affects the firm and its clients

Types of Projects:

Quantitative Modelling: Develop and validate models for:

- Pricing of financial contracts (securities and derivatives)
- Risk management – market, credit, liquidity, legal, and reputational
- Electronic trading in equity and fixed-income markets
- Portfolio analytics and trading strategies for diverse clients

Software & Systems Development: Design and build scalable systems to:

- Manage and visualize large-scale market data
- Route billions in daily securities orders efficiently
- Support representation and risk management of OTC derivatives
- Distribute computations across tens of thousands of nodes
- Leverage big data, functional programming, and next-gen platforms
- Contribute to open-source projects like *GSCollections*, *Project Panama*
- Build the firm's strategic mobile infrastructure

CGPA Cutoff: No

GD: No

Test:

Software & systems development: 3 coding questions (with 1 medium and 2 medium- hard questions) combined with MCQs (cs concepts like infix prefix conversion etc were asked).

Quantitative Modelling: Probability/Puzzle questions with 2 medium coding questions was asked

Interview:

There were 3 rounds of interviews:

Software & systems development:

Two technical and one HR rounds

The technical rounds mainly consisted of DSA questions based on the candidate's preferred language

Quantitative Modelling:

Round 1: Probability and math based.

Round 2: Discussion of the projects the candidate has mentioned in his/her resume

Round 3: Questions on resume along with basic coding and ML.

Note: Another candidate had all three probability-based rounds and questions were asked from relevant courses mentioned in the resume

Preparation Material:

- o MA2040 would be beneficial,
- o Interviewbit
- o Heard in the street.
- o 50 problems in probability.
- o Leetcode and codeforces for DSA.
- o Braintellar for puzzles
- o OOPS.
- o Interview Bits
- o PoE textbook

Suggestions:

- o CG is considered one of the shortlisting parameters.
- o Coding skills, aptitude, ability to handle stress are tested
- o Starting early is definitely a plus point. Practicing DSA and competitive coding is useful for most core internships.
- o I was bold to speak out and had done my background search of the company checking their principles - which helped a lot during the hr round
- o Answering most of the questions in the interview and thinking out loud during the interview helped the most.
- o Have some mock interviews with your friends to be better mentally prepared for actual interviews. Definitely watch fundae sessions of previous year interns if you get shortlisted for an interview.

Open for:

Undergraduate Degree

B. Tech-All

Dual Degree-All

Post Graduate Degree

MTech / M.S: Aerospace Engineering (Aerospace Engineering, Aerospace Engineering [M.S]), **Applied Mechanics** (Applied Mechanics [M.S], Biomedical Engineering, Clinical Engineering, Computational and Experimental Mechanics), **Bio-Technology** (Bio-Technology [M.S], Bioprocess Engineering), **Chemical Engineering** (Catalysis Engineering, Chemical Engineering, Chemical Engineering [M.S]), **Civil Engineering** (Atmospheric and Climate Sciences, Building Technology & Construction Mgmt., Civil Engineering [M.S], Construction Technology & Management-UoP, Environmental Engineering, Geotechnical Engineering, Hydraulics & Water Resources Engineering, Structural Engineering, Transportation Engineering), **Computer Science and Engineering** (Computer Science and Engg. [M.S], Computer Science and Engineering), **Electrical Engineering** (Communications, Networks & Signal Processing, Control Engineering and Optimization, Electrical Engineering [M.S], Electronic System Design and Instrumentation, Integrated Circuits & Systems, Micro Electronics & VLSI Design, Power Systems & Power Electronics, Quantum Science and Technology, RF, Optics & Photonics), **Engineering Design** (Automotive Engineering, Biomedical Engineering, Engineering Design [M.S]), **Mathematics** (Industrial Mathematics & Scientific Computing), **Mechanical Engineering** (Manufacturing Engineering, Mechanical Design, Mechanical Engineering [M.S],

Thermal Engineering), **Metallurgical and Materials Engineering** (Metallurgical and Materials Engineering, Metallurgical and Materials Engineering [M.S]), **Ocean Engineering** (Ocean Engineering, Ocean Engineering [M.S], Ocean Structure, Ocean Technology, Offshore Engineering, Petroleum Engineering), **Physics (B.S)** (Functions of Materials and Nanotechnology), **M.Sc** (Mathematics, Physics (B.S))

Stipend:

Currency Type: INR

Amount: 150000 Monthly

Other Facilities: No

Accommodation: For the first one week, if you are staying at a place different from the college location

Travel Allowance: Will be provided

Food Allowance: No

Google India

Profile : Software Engineering

Location: Bangalore/Hyderabad.

Offers: 15

Stipend:

Currency Type : INR

Amount : 135000 Monthly

Other Facilities

Accommodation : 165000

Travel Allowance : Cab for pickup/drop.

Food Allowance Will be provided in the office.

Relocation assistance: INR 55000

Duration: 10-12 weeks (May- Jul)

About Google India:

Google is and always will be an engineering company. It hires people with a broad set of technical skills who are ready to tackle some of technology's greatest challenges and make an impact on millions of users. At Google, engineers not only revolutionize search, they routinely work on massive scalability and storage solutions, large-scale applications, and entirely new platforms for developers around the world. From AdWords to Chrome, Android to YouTube, Social to Local, Google engineers are changing the world one technological feat after another.

Job Description:

As a Software Engineer intern, you'll work on Google's core products and services, contributing to critical engineering functions. Depending on your skills, you may:

Product and Systems Development:

Develop innovative software solutions, improve Google's products, and tackle complex technical challenges such as search quality, video indexing, networking, and large-scale systems. Specialist areas include UI development, security, mobile apps, and developer tools.

Engineering Productivity:

Design and build automated test systems to ensure the quality and reliability of Google's infrastructure. You'll create intelligent systems to test new technologies, going beyond basic debugging and test case execution.

Core Responsibilities:: vary by project area.

Cutoff: None

Preferred qualifications:

- Must be currently enrolled in a full-time degree program and returning to the program after the completion of the internship.
- Experience in systems software or algorithms.
- Excellent implementation skills (C++, Java, Python).
- Knowledge of Unix/Linux or Windows environments and APIs.
- Familiarity with TCP/IP and network programming.
- Soft skills: Collaborating in team communication.

Selection Process:

Resume and Test Shortlist followed by interviews (2 rounds)

CGPA cut-off: NA

Test:

- **Open Assignment :**
 - Duration - 1 hour
 - 2 questions (based on DSA)
- Getting one correct usually highlights your name for the company
- Medium to Difficult

GD: None

No of interview rounds - 2

Interview:

Round 1:

- Technical - 2 questions (medium level)
- Based on DSA, DP, Graph Theory

Round 2:

- Technical - 2 questions (medium level)
- DSA
- Questions from both rounds easier than test's questions

HR round : None

Suggestions:

- **Explain every Detail in the code.**
 - In-depth knowledge in Graphs.
 - Memory Management Techniques.
 - Good knowledge of Time Complexity and Space Complexity.
 - You have to be well versed with Dynamic Programming, Graph Theory, STL, DSA, CP.
 - Work with previously asked internship interview questions by Google in forums at various websites like codeforces, etc.
 - Since it is Google, ranks or achievements in Kickstart/Codejam are of value. Be active on codeforces and participate in Google coding contests.
 - Start simple, then try to optimize your solution. Thinking out loud helps.
- Don't be afraid to ask for help, communication is a key quality they look for.**

Preparation Material:

- Competitive Coding - leetcode, codechef, codeforces etc
- DSA and Graph Theory - GFG/other online courses ,Striver DSA sheet.
- Good knowledge of time/space complexity is appreciated

Open for:

- UG, Btech:
 - Computer Science & Engg
 - Electrical Engg
- PG, Dual Degree:
 - Computer Science & Engg
 - Electrical Engg

Hexa Climate Solutions Private Limited

Profile: Summer Intern

About Hexa Climate Solutions Private Limited:

Hexa Climate is a renewable energy and decarbonization IPP platform delivering 24/7 clean power through solar, wind, battery storage, and open access solutions. They offer advanced services like carbon offsets, energy management, and I-RECs. Anchored in ESG values, they build partnerships that benefit both businesses and local communities. Sustainability is their core, and they value creative minds to solve their toughest challenges.

Job Description:

The role centers on delivering innovative Renewable Energy Solutions to address pressing environmental challenges. Hexa Climate drives this mission by developing solar and wind projects across the country, while also strategizing to reduce carbon emissions and optimize carbon credits.

The company offered Finance, Consult, BD, Project Management roles as well
As a summer intern:

- As a Project Manager, you will be the one focusing on providing renewable energy solutions
- Plan on construction of solar and wind projects all over the country
- This role deals with providing energy credits to companies that have less carbon credits
- Creating innovative and adaptable solutions to reduce carbon credits
- In the Finance role, you are supposed to deal with land acquisition and other similar things

Shortlisting Process: Resume Shortlisting, Case Study, and interview

CGPA Cutoff : NA

Test: Case Study

GD: NA

No of interview rounds: 1

Interview:

- There was only one round of interview, which covered both the technical and HR

Sample Questions:

For Project Manager:

- Technical Questions, from the topics of Strength of Materials
- Case situation, where you are supposed to construct a turbine, what factors are you gonna consider?

For consult role:

- Questions on the energy market, energy grid and energy distribution
- Questions on energy distribution
- How renewable energy markets work - Power Trading

Suggestions:

- Focus more on the practical implementation, not a holistic view, don't go in depth regarding a particular topic
- Don't deviate to other roles while giving interview for one of the role, be clear while selecting the roles
- Take courses offered by institute, some include Energy Economics, Renewable Energy, Technology
- Have a broader picture of all departments and what they do
- Apply for as many companies as you can during the internship drive
- Having any CFI POR or any POR relevant to sustainability would give you an edge and also make sure that you explore various PORs in the institute.

Open for:

B-Tech : All

Dual Degree : All

Future Opportunities:

Market can offer much growth and better idea is you can start your startup and is field bound to very much growth, in collaboration with United Nations

Stipend:

Currency Type : INR

Amount: 150000

Other Information (Food, accommodation, Travel allowance): NA

IBM India

Profile: Hardware Engineer – Enterprise Systems Development Lab (ISDL)

About:

IBM is a 110-year-old global technology company and an industry leader in AI, Cloud, Quantum, Blockchain, and Systems. Present in India since 1992, it's known for R&D strength, services, and 28 years of patent leadership. The Business Unit, India Systems Development Lab (ISDL), part of IBM Systems, builds IT infrastructure: servers, storage, processors (IBM Z & Power Systems).

Job Description:

Interns will work on next-gen processor design (5nm/3nm tech), with exposure to: Logic Design, Physical Design, Verification & Validation, Custom Layout & Memory, Analog/Mixed-Signal Circuit Design, Library Characterization, SoC & ASIC Development, EDA Tool/Flow Development. The Focus areas will be: Processor Architecture & Design, Firmware & Systems Software, VLSI Design & Validation, Physical Design, Verification & EDA, Agile, DevOps & Design Thinking

Location: PAN India

Responsibilities include:

- Collaborate on processor and SoC design tasks.
- Contribute to verification, layout, and architecture projects.
- Assist in design automation through EDA tools.
- Develop scripts in Verilog, Python, Perl for design tasks.
- Work alongside global teams in a fast-paced engineering environment

Essential Skills:

- Digital Logic Design.
- Computer Architecture / RISC-V pipelines.
- VLSI Design Flow.
- CMOS, Custom Layout.
- Verilog
- Python / Perl

Shortlisting process: Branch and CGPA

CGPA cutoff- 7.0+ required, 8.0+ preferred

Test Pattern- Online Test (2 hrs): 60 MCQs: Digital Logic, Architecture, 3 Verilog coding questions (FSM, counter, etc.)

GD- No.

Interview Process -

Number of rounds – 2 (Technical, Managerial + HR)

Round 1: Tech: Setup/Hold, CDC, Verilog, COA topics

Round 2: Managerial + HR: Resume, behavioral, “Why IBM?”

Preparation Material & Suggestions –

- Study FSMs, pipelines, cache
- Books: Morris Mano, Hamacher COA
- Practice Verilog (design & sim)
- Be confident with term projects
- DigiQS & GfG for concept review
- Verilog + digital project experience is key
- Strong logic & architectural knowledge matters
- Focus on reasoning, honesty, and fundamentals

Open for:

Dual Degree – Electrical Engineering

Post Graduate Degree – M.Tech / M.S in Electrical Engineering (Communications, Networks & Signal Processing; Control Engineering and Optimization; Electronic System Design and Instrumentation; Integrated Circuits & Systems; Micro Electronics & VLSI Design; Power Systems & Power Electronics; RF, Optics & Photonics)

Doctorate – Phd in Electrical Engineering

Stipend (INR) - Dual Degree / M.Tech / M.S: ₹40,000/month, Ph.D.: ₹50,000/month

Other Information (Food , Accommodation and Travel Allowance): N/A

IBM India

Profile: Software Engineer – Enterprise Systems Development Lab (ISDL)

About:

IBM is a pioneer in AI, Cloud, Quantum, and Core Systems with a legacy of over 110 years. The company holds 28 consecutive years of patent leadership, a testament to its global focus on innovation and R&D. Operating in India since 1992, IBM has been a key player in IT services, software, and systems, and continues to build cutting-edge infrastructure solutions. India Systems Development Lab (ISDL) is IBM's premier hardware and software development center that focuses on building next-generation IT infrastructure solutions. It plays a central role in developing server processors, cloud-based systems, and firmware, particularly for IBM Z (Mainframe) and Power Systems. Key areas of focus include Processor & Firmware Development, Cloud Software, System Performance Testing, and Agile/DevOps/Design.

Job Description:

The internship at ISDL focuses on hands-on exposure to the design and development of complex hardware-software systems used in IBM's enterprise infrastructure. Interns work on mission-critical systems such as IBM Z (Mainframe) and Power Systems. Key areas interns contribute to include: Logic Design, Physical Design, Custom Layout, Analog & Mixed-Signal Design, Memory Design, ASIC/SoC Development, Simulation & Emulation, EDA Tool/Flow Development, Interns are expected to apply their theoretical knowledge in digital and computer systems to real-world problems and collaborate with global teams working on cutting-edge technology.

Responsibilities include:

- Participate in firmware and system software development for IBM Z and Power Systems.
- Assist in simulation/emulation, SoC/ASIC design, and debug.
- Contribute to physical design, layout, and performance analysis.
- Write and test scripts/tools in Python or Perl for automation and validation.
- Collaborate in Agile environments and contribute to system testing workflows.
- Gain deep exposure to performance-critical infrastructure in enterprise computing

Essential Skills:

- Technical: Logic Design, FSMs, Computer Architecture (RISC-V, Pipelining, Memory Caches), CMOS and VLSI Design Flow fundamentals.
- Programming: Python or Perl scripting (for testing, validation, automation).

Shortlisting process:

Degree Branches: CS, CE, AI, DS, Backlogs: Not allowed

CGPA cutoff- 8.0+ preferred

Test Pattern- Online Test (2 hrs): 60 MCQs: Digital Logic, Architecture, 3 Verilog coding questions (FSM, counter, etc.)

GD- No.

Interview Process -

Number of rounds – 3

Round 1: Online Assessment

- MCQs: Data Structures, Computer Architecture, Logic Design, Digital Circuits
- Coding: 1–2 questions on DSA and Systems-oriented problems.

Round 2: Technical Interview

- Resume Deep Dive: Projects, especially systems and logic-related.
- Questions from Systems Programming, Hardware Design, COA

Round 3: Managerial/HR Interview

- Behavioral questions
- Career motivation and cultural fit
- Past experience, long-term goals

Preparation Material & Suggestions:

Focus Topics:

- Digital Design (FSMs, Memory, Caches)
- Computer Architecture (Patterson & Hennessy)
- CMOS/VLSI Design (Weste & Harris)
- Scripting in Python for debugging and automation

Practice Resources:

- LeetCode (medium DSA problems)
- MIT OCW courses on Digital Systems
- Resume walkthrough – especially systems-level projects
- Revise term projects and circuit debugging experience.

Key Tips:

- Confidence in resume + system-level project exposure.
- Emphasize real-world debugging/design experience.
- Python scripting ability provides a clear edge.
- Clarity in core fundamentals + applied reasoning is critical

Open for:

Dual Degree – Computer Science, Computer Engineering, Artificial Intelligence, Data Science

Post Graduate Degree – M.Tech / M.S in Computer Science, Artificial Intelligence, VLSI, Embedded Systems, Data Science, etc.

Doctorate – Ph.D. in Computer Science / Electrical Engineering

Stipend (INR):

- ₹40,000/month for M.Tech / M.S / Dual Degree.
- ₹50,000/month for Ph.D.

Other Information:

- In-office internship, 8 weeks.
- No additional perks or relocation allowance

IMC Trading

Profile : Software Engineering Intern

Location : Mumbai

Offers :6

Stipend Structure:

Currency Type : INR

Stipend Type : Monthly

B.Tech - 250000

Accommodation, Meal allowance for Lunch and Local

Commute provided by Firm

About IMC Trading:

IMC is a leading trading firm known worldwide for their advanced, low-latency technology and world-class execution capabilities. Over the past 30 years, it has been a stabilizing force in the financial markets – providing the essential liquidity counterparties depend on.

Job Description :

As a Software Engineer Intern at IMC, you will be supported by a mentor who will oversee your projects and professional development. You will also have access to pair programming and code reviews.

Core Responsibilities :

- From day one, you are immersed in real projects, complex problem solving
- Should develop your knowledge of algorithm complexity, professional design, and writing fluent code
- Enhance your knowledge of their business model and learn about high-frequency trading
- Have the opportunity to secure a full-time role with IMC once you graduate.

CGPA cutoff :NA

Selection process:

There will be profiles offered to you like

- ❖ Trading
- ❖ Software development
- ❖ Hardware

As per the company policy you need to choose only one which cannot be changed when the selection process begins

- Tests
- GD
- Shortlisted will be taking their interviews

- One technical interview about 2hr on - Quant / Market making
- One HR round about 1hr

Shortlisting process:

1. Resume shortlist
2. Technical tests
3. Group Discussion
4. Technical Interview / Case Interview
5. HR Interview

Info Regarding Tests:

- Mainly focuses on Brain reaction time by making you play games and some Memory tests
- Also focuses on n online coding test - algorithm based 3-4 medium level questions
- For test practice <https://humanbenchmark.com/> web helps

GD: Basically an interview - to design a software

It had a booklet of 20 pages which had complete information of what software was supposed to be designed - with 20 mins prep time.

There were 4 interviewers and the interview was for 30 minutes where the approach to the problem was discussed

Next 50 minutes was for coding it in the interviewer's laptop itself

They run and see how many test cases it pass

Technical Interview :

Market Making - mainly focus on your Nac for trading ,fast calculations ,reasoning

Quant - mainly focuses on the probability and expected profits

Preparation Material :

- Probability - Heard on the street , brain slack puzzle
- Practice competitive programming (CP) on platforms like Codeforces
Online platforms like LeetCode for practicing Data Structures and Algorithms (DSA) problems
- Solidify your understanding of core concepts.
- Start familiarizing yourself with common interview resources like online assessment questions from target companies a month before your summer break begins.

Fundae session :

Jane Street

Profile: Quantitative Trading

Location: Hong Kong

Stipend:

Currency Type: HKD:

Amount: 166666

Other information

Stipend: HKD 166,666 (INR 17,81,250~) per month. Sign-on Bonus: HKD 200,000 (INR 21,37,514~) Travel: Your travel to and from Hong Kong (and any inter-office travel) will be arranged and paid for by Jane Street. You will also spend one week in the Jane Street New York or London office. Accommodation: You will be provided with either corporate accommodation arranged by Jane Street or if you prefer to arrange housing yourself, a housing stipend of HKD 21,000 (INR 2,24,607~) per month. Visa: Work Visa for Hong Kong and any other visas required for work related travel will be sponsored by Jane Street. Food: Breakfast and lunch are served in the office during workdays.

About Jane Street:

Jane Street is a global quantitative trading firm that uses advanced technology and research to trade a wide range of financial products. Known for its collaborative culture and expertise in electronic trading, Jane Street is a leader in the industry and operates in major financial centers worldwide.

Job Description:

As a Quantitative Trading intern, you'll be paired with experienced traders who will mentor you in analyzing market signals, building quantitative models, and developing trading strategies. You'll work on a variety of hands-on projects, such as studying datasets, constructing models, and creating new tools, while rotating through different trading areas for broader exposure. The program also includes classes on trading fundamentals, interactive trading simulations, and lunch seminars. While programming experience is helpful, the main focus is on problem-solving, statistical analysis, and learning how technology powers successful trading strategies.

Selection Process: Resume shortlisting, test (only for a few), two 50-60 min Zoom call interviews before the Day 1, interview

Test: Online – 2Hrs. After resume shortlist, selected students will be invited to the first step which will be an online test (focused on math/probability puzzles) OR a Zoom call with a trader (working on math/probability puzzles).

Those who pass the first step will be invited to the next Zoom call with another trader, also working math/probability puzzles but slightly more difficult.

CGPA Cutoff : - Official CG cutoff was 7. But the first round zoom calls were ordered on the basis of CGPA.

GD: No

No of interview rounds - 3

Interview:

- Students who pass the first two steps will be invited for final day interviews which will consist of three back-to-back 1-hour rounds of math/probability puzzles and betting games.
- All rounds are technical, no HR.
- All rounds have probability and problem-solving questions. Expected values were asked in a lot of questions.
- Each round involved some sort of a trading game, involving cards, dice & coins.
- Questions involved decision-making using probability, problems involving games wherein you need to develop a strategy for positive expectancy, and game theory.
- Skills tested - Estimation of expected value, market making (the required market making will be taught before the interview. Understanding that is crucial).
- Mostly no coding involved. Some candidates had very basic coding questions.

Round 1:

- For some students, it was a test. For others, interview.
- 1-2 hours

Round 2:

- 1-2 hours

Round 3:

- 1-2 hours

Suggestions:

- Math Olympiad ranks, Jee advanced rank, CGPA, and ML-based projects are some points that can help during resume shortlisting.
- Problem-solving based on logical thinking and probability is the major focus of the selection process once resume shortlisting is done.
- Good depth in the basics of probability, and good thinking to reason out and find optimal strategies help.
- Background in finance is not exactly necessary but might give an edge
- Be a little comfortable with Excel.
- Solve puzzles.
- DSA knowledge and starting CP early helps for SD & Quant interns.
- Don't hesitate to speak up during the interview, be free, calm, and show interest in problems during the interview. Even if you take time to think before answering, try not to take long and speak up once in a while, the interviewer could help.
- Speak up and understand the problem properly by asking clarifying questions.
- Look at the process of solving a problem as more of a discussion and keep giving updates on what you are doing. Show your thinking process.
- Once you make it to the interview process, can reach out to seniors placed there for a better understanding of what to expect.

Preparation Material:

- <https://youtu.be/qqlLuggyfkA> https://youtu.be/NT_1lMjckaU - an excellent and accurate example of their interview process.
- Brainstellar for problem-solving.
- Books like 'Heard on the Street 40 probability questions', '50 problems of probability'. Other books with logical reasoning questions and probability questions.
- Jane Street's website has problems.

Open for:

- Btech: All
- Dual Degree: All
- IDDD: Computational Engineering
- MTech: Computer Science & Engg, Electrical Engg, Mathematics, Physics

Jane Street

Profile: Software Engineering Intern

About Jane Street:

Jane Street is a proprietary trading firm that operates globally, known for its quantitative analysis and role as a market maker. It employs a large workforce, trades on numerous exchanges, and is recognized for its expertise in various asset classes.

Job Description:

Our goal is to give you a real sense of what it's like to work at Jane Street full time. Over the course of your internship, you will explore ways to approach and solve exciting problems within your field of interest through fun and challenging classes, interactive sessions, and group discussions — and then you will have the chance to put those lessons to practical use.

As an intern, you are paired with full-time employees who act as mentors, collaborating with you on real-world projects we actually need done. When you're not working on your project, you will have plenty of time to use our office amenities, physical and virtual educational resources, attend guest speakers and social events, and engage with the parts of our work that excite you the most. If you've never thought about a career in finance, you're in good company. Many of us were in the same position before working here. If you have a curious mind, a collaborative spirit, and a passion for solving interesting problems, we have a feeling you'll fit right in.

As a Software Engineering intern, you'll learn how we use OCaml (our primary development language) in our day-to-day work, and gain exposure to the libraries and tools that are foundational to our internal systems. During the program you'll work on two projects, mentored closely by the full-time employees who designed them. Some projects consider big-picture questions that we're still trying to figure out, while others involve building something new. Your mentors will work in two distinct areas, so you'll gain a better understanding of the wide range of problems we solve every day, from high performance trading systems to programming language design and everything in between.

About you

We don't expect you to have a background in finance, OCaml, functional programming, or any other specific field — we're looking for smart people who enjoy solving interesting problems.

We're more interested in how you think and learn than what you currently know.

You should be:

- A top-notch programmer with a passion for technology
- Collaborative and courteous with strong interpersonal and communication skills
- Eager to ask questions, admit mistakes, and learn new things
- Fluent in English

Shortlisting Process: Resume shortlisting, interviews

CGPA Cutoff: - No explicit cutoff

GD: No

No of interview rounds - 3

Interview:

- All rounds are technical, no HR.
- Software development algorithms, clean code, design patterns and approach while solving problems were focussed.
- At each step check whether you are able to get your idea to the interviewer.
- They will have a shared interface on which you have to write a pseudocode just so that the interviewer can get your approach.

Suggestions

- Math Olympiad ranks, JEE Advanced rank, CGPA, and ML-based projects are some points that can help during resume shortlisting.
- Problem-solving based on logical thinking and probability is the major focus of the selection process once resume shortlisting is done.
- Good depth in the basics of probability, and good thinking to reason out and find optimal strategies help.
- Background in finance is not exactly necessary but might give an edge
- Be a little comfortable with Excel.
- Solve puzzles.
- Don't hesitate to speak up during the interview, be free, calm, and show interest in problems during the interview. Even if you take time to think before answering, try not to take long and speak up once in a while, the interviewer could help.

- Speak up and understand the problem properly by asking clarifying questions.
- Look at the process of solving a problem as more of a discussion and keep giving updates on what you are doing. Show your thinking process.
- Once you make it to the interview process, you can reach out to seniors placed there for a better understanding of what to expect.

Preparation Material:

- Brainstellar for problem-solving.
- Books like 'Heard on the Street 40 probability questions', '50 problems of probability'. Other books with logical reasoning questions and probability questions.
- Jane Street's website has problems.

Open for:

- Btech: Computer Science & Engg, Electrical Engg
- Dual Degree: Computer Science & Engg, Electrical Engg, Computational Engineering

Stipend:

Currency type:- HKD

Amount: 166666

Other Information (Food , Accommodation and Travel Allowance): Stipend: HKD 166666 (INR 17,81,250~) per month. Sign-on Bonus: HKD 200,000 (INR 21,37,514~) Travel: Your travel to and from Hong Kong (and any inter-office travel) will be arranged and paid for by Jane Street. You will also spend one week in the Jane Street New York or London office. Accommodation: You will be provided with either corporate accommodation arranged by Jane Street or if you prefer to arrange housing yourself, a housing stipend of HKD 21,000 (INR 2,24,607~) per month. Visa: Work Visa for Hong Kong and any other visas required for work related travel will be sponsored by Jane Street. Food: Breakfast and lunch are served in the office during workdays.

JP Morgan

Profile: Quantitative Research Internship

About:

J.P. Morgan is a global leader in financial services, providing strategic advice and products to the world's most prominent corporations, governments, wealthy individuals and institutional investors.

The Corporate & Investment Bank is a global leader across investment banking, wholesale payments, markets and securities services. The world's most important corporations, governments and institutions entrust us with their business in more than 100 countries. We provide strategic advice, raise capital, manage risk and extend liquidity in markets around the world.

Clients turn to our industry-leading Markets, Sales and Research team to offer clients unique market insights on sectors and companies, and actionable ideas using research to make well-informed investment decisions. Teams understand products across asset classes and help clients structure solutions that manage risk, enhance yield and solve complex financial problems.

Quantitative Research (QR) is an expert quantitative modeling group in J.P. Morgan, as well as a leader in financial engineering, data analytics, statistical modeling and portfolio management. As a global team, QR partners with traders, marketers and risk managers across all products and regions, contributes to sales and client interaction, product innovation, valuation and risk management, inventory and portfolio optimization, electronic trading and market making, and appropriate financial risk controls.

Job Description:

The QR team's mission is to develop and maintain sophisticated mathematical models, cutting-edge methodologies and infrastructure to value and hedge financial transactions ranging from vanilla flow products to complex derivative deals, as well as improve the performance of algorithmic trading strategies and promote advanced electronic solutions to our clients worldwide. We also work closely with trading desks to develop statistical arbitrage strategies and other quantitative trading models.

In addition, we provide on job training by our experienced quants. Through the diversity of the businesses it supports and the variety of functions that it is responsible for, Quantitative Research group provides unique growth opportunities for you to improve your abilities and progress your career.

We make reasonable accommodations for applicants' and employees' religious practices and beliefs, as well as any mental and physical health needs or particular family considerations.

If you are passionate, curious and ready to make an impact, we are looking for you.

Location: Mumbai/ Bangalore

What They Need:

- You have a degree in engineering, financial engineering, computer science, mathematics, sciences, statistics, econometrics, or other quantitative fields
- You have exceptional quantitative, analytical and problem-solving skills
- You have excellent communication and interpersonal skills
- You have ability to work independently as well as in a team environment
- You have knowledge of data structures and algorithms
- You have programming experience of Python / C++

Other Requirements:

- Experience with data schemas and data structures would be useful in this role
- Knowledge of derivative pricing, stochastic calculus, advanced probability, and high-performance computing would be a plus
- Background in computer algorithms, python, and specialization (or significant coursework) in either (1) machine learning or (2) low level systems (operating systems, compilers, GPUs, etc.)

• General finance concepts and terminology is useful to be familiar with
Beyond that, we're interested in the things that make you unique: personal qualities, outside interests and achievements beyond academia and profession that demonstrate the kind of person you are and the differences you could bring to the team.

Shortlisting process:

CGPA cutoff 7.5+ is required to qualify for online test

Test Pattern - MCQ, objective and Coding. Probability and Math based

Interview Process -

Number of rounds - 4

First 2 technical, 3rd math and 4th HR

https://pradhyumn.netlify.app/blog/jpmc_interview/

Suggestions -

- Good grades with finance and tech roles in your resume will definitely be a distinguishing factor. They appreciate good diversity.
- Focus more on building the tech skills and improving your logical reasoning abilities. Brush up on math concepts. Learn some finance.
- Try doing tech projects related to quant, it will make a good impression.

Preparation Material:

- Hard Skills - Insti MA2020, Insti MA2040, Insti DSA, LeetCode. Brainstellar, PuzzledQuant, Ted Ed Riddles, GeeksForGeeks 50, Strivers A2Z DSA sheet.
- Soft skills - Toastmasters international. Have a good command of spoken English. Articulation is a desirable skill across the board.

Open for:

Btech - All

Dual Degree - All

Stipend (INR) - 175,000 (monthly)

Other Information (Food , Accommodation and Travel Allowance): One Time relocation Lump Sum - 50000

JP Morgan

Profile: CIB Research & Analytics, Markets - Comprehensive Capital Analysis and Review (CCAR) & Sales

About:

J.P. Morgan is a global leader in financial services, providing strategic advice and products to the world's most prominent corporations, governments, wealthy individuals and institutional investors.

The Corporate & Investment Bank is a global leader across investment banking, wholesale payments, markets and securities services. The world's most important corporations, governments and institutions entrust us with their business in more than 100 countries. We provide strategic advice, raise capital, manage risk and extend liquidity in markets around the world.

Clients turn to our industry-leading Markets, Sales and Research team to offer clients unique market insights on sectors and companies, and actionable ideas using research to make well-informed investment decisions. Teams understand products across asset classes and help clients structure solutions that manage risk, enhance yield and solve complex financial problems.

The Commercial & Investment Bank Research & Analytics is an integrated specialist team covering Origination (Banking and Markets), Products (Securities Services and Treasury Services), Research, Data Analytics and Strategy globally. We help global corporations, institutions and organizations of all sizes grow their businesses by providing cutting edge analytics and solutions. This group provides you an opportunity to collaborate and work in a high paced global environment and develop a wide range of technical (financial, analytical, quantitative, and coding) and interpersonal skills. Depending upon the function you are part of, you will be making an impact in providing solutions to our Commercial & Investment Banking clients.

Job Description:

J.P. Morgan's Markets Group (part of CIB Research & Analytics) in Mumbai was set up as an extension of the Firm's global markets teams across regions. It's a

growing team covering multiple asset classes within the Markets umbrella – FI /Equities - across geographies. The activities can be broadly bucketed as Sales, Trading & Structuring, Finance and Sales support. The team is based out of the L & T office of J.P. Morgan in Powai, Mumbai. At J.P. Morgan, we're creating positive change for the diverse communities we serve. We do this by championing your innovative ideas through a supportive culture that helps you every step of the way as you build your career. J.P. Morgan's Markets Group provides a challenging work environment and excellent opportunities to learn and grow both at the CIB R&A and in the Firm's global network. If you're passionate, curious and ready to make an impact, we're looking for you.

Location: Mumbai

Responsibilities include:

- Conducting in-depth data analysis and building predictive/explanatory models using decision trees, neural networks, etc.
- Developing and coding regression/statistical models in R/Python for business applications.
- Translating business needs into quantitative analyses and communicating insights to senior stakeholders.
- Creating metrics and statistical model prototypes to influence business outcomes.
- Leading India-based forecast modeling using advanced statistical methods; presenting to regulators and committees.
- Supporting senior management and regulatory initiatives through ad-hoc projects.
- Collaborating with the sales team on pricing fixed income derivatives and structured products; assisting with trade execution and documentation.
- Analyzing research/trade ideas to create client-relevant investment strategies.
- Developing pitch books and factsheets that align products with current market conditions.
- Managing post-trade lifecycle events and resolving client queries on settlements, reconciliations, and documentation.
- Driving process improvement and automation; enhancing pricing tools and supporting client roll-outs.

Essential Skills:

- Experience of working on R/Python statistical, analytical and machine learning libraries,

- Knowledge of probability theory, statistics and machine learning would be an advantage.
- Advanced user of MS Office suite, including Word and PowerPoint.
- Close attention to detail and ability to work to very high standards.
- Strong quantitative and analytical skills.
- Strong communication skills (both written and verbal) and ability to present findings to a non-technical audience.
- Ideal candidates for these positions would be graduates/post-graduates with good academic records from esteemed universities with some exposure to finance/actuaries/accounting and/or derivatives.
- Strong knowledge of Equities, FX, Rates, Fixed Income or Commodities.
- Good communication and team skills in a multi-location set up (working closely with teams based across regions).

Shortlisting process:

Resume shortlist, test, interview

CGPA cutoff: 7.5+

Test Pattern: Probability, DSA, Finance, General Maths will be tested

GD: No.

Interview Process -

Number of rounds - 4 (Resume, Finance, DSA & Probability, HR)

Suggestions -

- Interview questions were more or less from LeetCode or brainstellar, so be familiar with it.
- Be thorough with the projects that you have written in your resume.
- Be confident, if time permits and if they have given you a soft offer after the interview then wait there for sometime.
- Have a good hold on DSA, ML and Maths.

Preparation Material:

- Brainstellar, LeetCode, 50 problems in probability, ma2040 textbook, Zerodha Varsity for finance, aptitude puzzles
- DSA and ML online courses and youtube videos.

Open for:

Btech - All

Dual Degree- Aerospace Engineering, Biological Engineering, Biological Sciences (M.S.), Chemical Engineering, Civil Engineering, Computer Science and Engineering, Electrical Engineering, Engineering Design, Mechanical Engineering, Metallurgical and Materials Engineering, Naval Architecture and Ocean Engineering, Physics (M.S.), Advanced Materials and Nanotechnology, Atmospheric and Climate Sciences, Biomedical Engineering, Complex Systems and Dynamics, Computational Engineering, Cyber Physical Systems, Data Science, Electric Vehicles, Energy Systems, Public Policy, Quantitative Finance, Quantum Science & Technology, Robotics

Stipend (INR) - 150,000 (monthly)

Other Information (Food , Accommodation and Travel Allowance): One Time relocation Lump Sum - 50000

JP Morgan

Profile: Commercial & Investment Bank Research & Analytics, Markets – Trading and Structuring

About:

J.P. Morgan is a global leader in financial services, providing strategic advice and products to the world's most prominent corporations, governments, wealthy individuals and institutional investors.

The Corporate & Investment Bank is a global leader across investment banking, wholesale payments, markets and securities services. The world's most important corporations, governments and institutions entrust us with their business in more than 100 countries. We provide strategic advice, raise capital, manage risk and extend liquidity in markets around the world.

Clients turn to our industry-leading Markets, Sales and Research team to offer clients unique market insights on sectors and companies, and actionable ideas using research to make well-informed investment decisions. Teams understand products across asset classes and help clients structure solutions that manage risk, enhance yield and solve complex financial problems.

We help global corporations, institutions and organizations of all sizes grow their businesses by providing cutting edge analytics and solutions. This group provides you an opportunity to collaborate and work in a high paced global environment and develop a wide range of technical (financial, analytical, quantitative, and coding) and interpersonal skills. Depending upon the function you are part of, you will be making an impact in providing solutions to our Corporate & Investment Banking clients.

Job Description:

JP Morgan's Market Group (part of CIB Research and Analytics) in Mumbai was set-up as an extension of the Firm's global markets teams across regions. It's a growing team covering multiple asset classes within the Markets umbrella FI /Equities -across geographies.

The activities can be broadly bucketed as Sales, Trading & Structuring, Finance and Sales support. The team is based out of the L & T office of J.P. Morgan in Powai, Mumbai. The Structuring and Trading team in Mumbai will be part of the Global Equity and Credit Derivative Groups. The work involves maintenance, creation and development of new tradable assets, on which J.P. Morgan sells

derivative products to clients (delta one swaps, notes, certificates, options etc.). The key responsibilities of the team include back testing and analysis of existing and new proprietary strategies, structuring and pricing of derivative products, making marketing material and legal documents etc.

Location: Mumbai

Responsibilities include:

- Idea Generation: Collaborate with Structuring/Sales desks to analyze market data, backtest strategies, and generate product ideas.
- Model Development: Use statistical/ML techniques to build and backtest alpha-generating index strategies.
- New Product Design: Code and test new trading strategies in Python; support strategy innovation.
- Pricing: Provide pricing on derivative structures using internal models as per client needs.
- Strategy Maintenance: Manage and monitor existing systematic trading strategies on a Python-based platform.
- Platform Development: Contribute to the enhancement of the Investable Indices platform with independent ideas.
- Business Insight: Convert business problems into quantitative models; present findings clearly to stakeholders.
- Market Monitoring: Prepare reports on economic, interest rate, and FX trends with internal market outlook.

Essential Skills:

- Strong knowledge and experience in pricing of derivatives – indices, futures and options
- Strong knowledge of Equities, FX, Rates, Credit or Commodities
- Proven experience programming in any object oriented programming language or functional (statistical/numerical) programming language (Python, R etc.)
- Analytical aptitude and ability to learn financial concepts.
- Knowledge of probability theory, statistics and machine learning would be an advantage.
- Advanced user of MS Excel (VBA knowledge would be an advantage)
- VBA and any programming language knowledge can be an advantage
- Good communication and team skills in a multi-location set up
- Strong communication skills (both written and verbal) and ability to present findings to a non-technical audience.
- Must be willing to work in Asia, UK or US hours depending on the alignment of work.
- Close attention to detail and ability to work to very high standards.

Shortlisting process: Branch and CGPA

CGPA cutoff- 7.5+

Test Pattern- one test, two parts: Quant and Market Analytics. One coding question and some Maths & Finance questions.

GD- No.

Interview Process -

Number of rounds - 3 (Maths, Coding, HR)

Round 1:

- Maths: Questioned mostly about resume, with prime focus on Projects. Couple of Maths and PnC questions.

Round 2:

- Coding: Pseudo code in Python/C++

Round 3

- HR: Behavioural

Preparation Material & Suggestions -

- Prepare for Maths and Finance questions that will be asked in the tests.
- Attend PPTs
- Go through your resume properly, have detailed understanding of your projects
- Brush up your finance skills (basics like stock trading, buy and sell etc.)
- Practice general coding questions on LeetCode. Do each question in detail.
- Go through a Glossary/ Question bank for Finance questions.
- A lot of OOP is required in the role, so practice OOP if you are selected for the role.

Open for:

Btech - All

LinkedIn

Job Designation Offered: Artificial Intelligence - Machine Learning Engineer Intern

Type of Offer: Domestic

Type of Internship: Summer

Total Duration :12 (In Weeks)

Mode Of Internship: In-Office

Internship Location: Bengaluru

About:

LinkedIn is a business-oriented social media platform and professional networking website founded in 2003. It connects professionals, allowing them to establish and manage their professional networks, find job opportunities, and share industry news. Owned by Microsoft since 2016, LinkedIn is the world's largest professional network, with over 1 billion members.

Job description:

LinkedIn's mission is to connect professionals and help them thrive. At the heart of this is our content ecosystem—where members engage through posts, videos, articles, and more. The AI team ensures this ecosystem remains safe and professional by detecting hate speech, misinformation, and offensive content using machine learning, NLP, computer vision, and large-scale data processing.

We are seeking full-time research interns to tackle these challenges. This role requires on-site presence to support collaboration and access to specialized equipment.

Responsibilities:

- Work with big data—process millions of samples for:
 - Statistical modelling
 - Data mining
 - Recommendation systems
 - Search relevance solutions
- Write production-quality code for LinkedIn's systems
- Influence the next generation of AI infrastructure at LinkedIn

Preferred Qualifications

- Research Contributions:

- o Experience in research projects
 - o Publications in major conferences or journals
 - o Contributions to open-source projects
- Technical Expertise in at least one area:
 - o Natural Language Processing (NLP)
 - o Computer Vision
 - o Information Retrieval
 - o Recommender Systems
 - o Machine Learning
 - o Deep Learning
 - o Advanced Statistics and Optimization

Suggested Skills

- Ability to design and execute research agendas
- Experience with Deep Learning frameworks (e.g., TensorFlow)
- Familiarity with Spark, Scala, or other MapReduce paradigms

CGPA cutoff: N-A

GD: No

Tests and Interview process:

Test: online proctored test on DSA and ML questions, there were three questions on DSA (1 Leetcode easy and 2 Leetcode medium), questions were based on two pointers, array and stack/queue. The ML problems were related to computing means, variance of an array without using built in lib and other problems were also related to basic statistics and probability.

Shortlisting Process:

- Total candidates shortlisted: 12 for the technical round
- Candidates selected for final round: 5
- Final offers made: 3 (2 for SDE Intern, 1 for AI/ML Intern)
- Role applied: AI/ML Internship

Round 1: Technical Interview (60 mins)

- Format: Split into two 30-minute segments – DSA and ML
- DSA Segment:
 - One Leetcode Easy (variation of the Three Sum problem)
 - One Leetcode Medium on strings
 - Focus was on logic, approach, and pseudocode, not necessarily successful code execution
 - Follow-up questions on data structures and algorithms used

ML Segment:

- Basics of Python programming
- Conceptual questions on machine learning algorithms and computer vision
- Questions tailored to topics from previous projects and internship experience

Round 2: Host Manager Interview (45 mins)

- Conducted by a senior LinkedIn professional
- In-depth discussion on past projects and internships
- Detailed questions on:
 - Python frameworks and libraries used
 - Evaluation metrics and use cases
 - Technical decisions and trade-offs
- Included behavioural questions to assess fit and communication
- More conversational, with emphasis on depth over breadth

Open to:

Undergraduate Degree:

B. Tech- All

Dual Degree- All

Post Graduate Degree:

MTech / M.S- All

Stipend Information:

Currency Type: INR

Stipend Type: Monthly

Amount: 80,000

Travel food and accommodation allowance will be provided

LinkedIn

Profile: Software Engineer Intern

Type of Offer: Domestic

Nature of Profile: Software

Type of Internship: Summer

Total Duration :12 (In Weeks)

Mode Of Internship: In-Office

Internship Location: Bengaluru

About:

LinkedIn is a business-oriented social media platform and professional networking website founded in 2003. It connects professionals, allowing them to establish and manage their professional networks, find job opportunities, and share industry news. Owned by Microsoft since 2016, LinkedIn is the world's largest professional network, with over 1 billion members.

Job Description:

LinkedIn helps professionals grow by enabling meaningful connections, opportunity discovery, and insight sharing. We are more than a digital resume—we transform lives through technology.

As a Software Engineering Intern, you will work on real-world projects involving large-scale infrastructure, advanced algorithms, and mobile/web applications. You'll collaborate with top technical talent and gain hands-on experience that directly impacts millions globally.

This is a full-time, in-office role to ensure the best setup for success.

Join us and help shape the future of work.

Responsibilities:

1. Scale distributed applications, make architectural trade-offs applying synchronous and asynchronous design patterns, write code, and deliver with speediness and quality.
2. Develop multi-tier scalable, high-volume performing, and reliable user-centric applications that operate 24x7.
3. Produce high quality software that is unit tested, code reviewed, and checked in regularly for continuous integration.

Preferred Qualifications:

1. Programming experience in Java, C/C++, and C#
2. Object oriented skills
3. Experience in data structures, algorithms, and software design

4. Background in computer science

Suggested Skills:

- Data Structures & Algorithms
- Software Design
- Java

CGPA cutoff: N-A

GD: No

Tests and Interview Process:

- o The test was offline for 1.5 hrs duration, 2 very easy coding questions and some 20 MCQs on data structures mostly and there was some other section also which was to be solved if applying for an AI/ML role.
- o 1 Technical round of Interview: Questions based on BST and merge sort
- o 1 Behavioural/ HR round: Questions about what you did in the institute, where your interests lie, introduction, achievements, and all that, more about the stuff that is not in the resume

Open to:

Undergraduate Degree

B Tech - All

Dual Degree - All

Post Graduate Degree

M Tech / MS- All

Stipend Information:

Currency Type: INR

Stipend Type: Monthly

Amount: 80,000

Travel food and accommodation allowance will be provided

Mastercard

Profile: Intern: Data Science

About Mastercard:

Our Vision:

AI Garage is responsible for establishing Mastercard as an AI powerhouse. AI will be leveraged and implemented at scale within Mastercard providing a foundational, competitive advantage for the future. All internal processes, all products and services will be enabled by AI continuously advancing our value proposition, consumer experience, and efficiency.

Opportunity:

Join Mastercard's AI Garage @ Gurgaon, a newly created strategic business unit executing on identified use cases for product optimization and operational efficiency securing Mastercard's competitive advantage through all things AI. The AI professional will be responsible for the creative application and execution of AI use cases, working collaboratively with other AI professionals and business stakeholders to effectively drive the AI mandate.

Job Description:

Role:

- Develop AI/ML solutions/applications leveraging the latest industry and academic advancements.
- Strong theoretical understanding of statistical techniques, machine learning algorithms and their mathematical underpinnings.
- Interpret and explain model predictions and insights to varied audiences.
- Thrive in an unstructured environment, working autonomously on a strong team to find opportunity and deliver business impact.
- Leverage open and closed source technologies to solve business problems.
- Ability to work cross-functionally, and across borders drawing on a broader team of colleagues to effectively execute the AI agenda.
- Partner with technical teams to implement developed solutions/applications in production environments.
- Support a learning culture continuously advancing AI capabilities.

All About You:

Experience:

- Demonstrated passion for AI competing in sponsored challenges such as Kaggle.

- Previous experience with or exposure to:
 - o Deep Learning algorithm techniques, open-source tools and technologies, statistical tools, and programming environments such as Python, R, and SQL.
 - o Big Data platforms such as Hadoop, Hive, Spark, GPU Clusters for deep learning.
 - o Classical Machine Learning Algorithms like Logistic Regression, Decision trees, Clustering (K means, Hierarchical and Self-organizing Maps), TSNE, PCA, Bayesian models, Time Series ARIMA/ARMA, Recommender Systems - Collaborative Filtering, FPMC, FISM, Fossil.
 - o Deep Learning algorithm techniques like Random Forest, GBM, KNN, SVM, Bayesian, Text Mining techniques, Multilayer Perceptron, Neural Networks - Feedforward,
 - o CNN, LSTM's GRU is a plus. Optimization techniques - Activity regularization (L1 and L2), Adam, Adagrad, Adadelta concepts; Cost Functions in Neural Nets - Contrastive Loss, Hinge Loss, Binary Cross entropy, Categorical Cross entropy; developed applications in KRR, NLP, Speech and Image processing.
 - o Deep Learning frameworks for Production Systems like Tensorflow, Keras (for RPD and neural net architecture evaluation), PyTorch and Xgboost, Caffe, and Theano is a plus.

Effectiveness:

- Effective at managing and validating assumptions with key stakeholders in compressed timeframes, without hampering development momentum.
- Capable of navigating a complex organization in a relentless pursuit of answers and clarity.
- Enthusiasm for Data Sciences embracing the creative application of AI techniques to improve an organization's effectiveness.
- Ability to understand technical system architecture and overarching function along with interdependency elements, as well as anticipate challenges for immediate remediation.
- Ability to unpack complex problems into addressable segments and evaluate AI methods most applicable to addressing the segment.
- Incredible attention to detail and focus instilling confidence without qualification in developed solutions.

Core Capabilities

- Strong written and oral communication skills
- Strong project management skill

Shortlisting Process: Resume shortlisting and test

CGPA Cutoff: 7.5+ (75%+ in 10th and 12th)

GD: No

No of interview rounds: 3 (2 Technical + 1 HR)

Test:-

- 2 medium levelled leetcode dsa question.
- More focus on graphs and dp.
- MCQ questions based on ML.
- Focus on neural networks and ML concepts.

Interview:

- Round 1 had DSA and project related questions.
- Round 2 had questions related to implementation and technical aspects of your project and some questions related to ML.
- HR round had generic questions on you.

Suggestions:

- The test was online and had medium to hard dsa questions. More focus on graph and DP questions.
- It would be beneficial to have knowledge on basic ML algorithms and some course/project related to the profile.

Preparation Material:

- Ultimate DSA Sheet, Striver A to Z.
- Related Brainstellar questions.
- Courses related to Data Science like Andrew NG courses.

Open for: B.Tech: Computer Science and Engineering, Electrical Engineering.
Dual Degree: Data Science.

Stipend: INR 75,000 per month.

McKinsey & Company

Profile: Consulting

About:

McKinsey & Company is a global management consulting firm and part of the prestigious “MBB” trio (McKinsey, BCG, Bain). It partners with leading businesses, governments, and institutions to solve their most pressing problems. McKinsey is known for its analytical rigor, top-tier talent, and impact-driven solutions. It fosters a culture of mentorship, learning, and rapid professional growth, offering unparalleled exposure to real-world challenges across industries.

Job Description:

As a Summer Intern, the candidate works with client-facing teams to address strategic business problems. Interns experience the full consulting lifecycle—from structured problem-solving and quantitative analysis to client interactions and team collaboration.

Interns go through:

- Formal onboarding & training on problem-solving tools and frameworks
- Live client projects across domains like strategy, operations, or transformation
- Close mentorship from senior consultants and analysts

Location: Mumbai / Gurugram (primarily assigned post-interview; may vary)

Open to:

B.Tech – All Branches

Dual Degree – All Branches

Shortlisting Process:

- Resume Shortlist
- Buddy Process
- Final Interviews

CGPA Cutoff: No explicit cutoff (CGPA > 8.5 recommended)

GD: Not conducted

No. of Interview Rounds: 2

Post-Shortlisting: Buddy Process (Evaluative)

Once shortlisted, each candidate is assigned:

- A Junior Buddy (recent hire or past intern)
- A Senior Buddy (Associate or EM level)

The buddy process is designed to:

- Help candidates prepare for interviews
- Evaluate communication, structure, and coachability
- Share real insights into the firm's work and culture

Note: The buddy process is evaluative—treat every interaction professionally, be responsive, and show improvement.

Virtual Engagement Session:

Instead of a pre-interview dinner, McKinsey organizes a virtual event with shortlisted candidates, current consultants, and HR.

This session is observed and can influence final decisions. Example: A candidate was recommended based on active and thoughtful participation during the virtual session.

Interview Process:

No. of Interview Rounds: 2

Two interview rounds, each consisting of:

1. Structured Case Interview
2. Personal Experience Interview (PEI)

Examples:

- Guesstimate: Estimate the number of ATM withdrawals in Chennai per day
- Case: Steel manufacturer wants to expand—evaluate based on geography, resources, distribution, etc.

Assessment Areas:

- Structured thinking (MECE)
- Quantitative and logical reasoning
- Creativity and business acumen
- Clarity of communication
- Leadership, impact, and teamwork through past experiences

Preparation Material:

- Case Books: IIT Bombay, SRCC, INSEAD, IIM A/B
- Videos & Articles: Victor Cheng, StrategyCase, CaseInterview.com
- Official Sites: Practice cases from McKinsey, BCG, Bain
- Case Competitions: L.I.M.E, Optum Stratethon, BLoC, etc.
- Peer Practice & Buddy Cases.

Suggestions:

- Begin preparation around May, ideally with a case group
- Build a strong resume with well-defined spikes—PoRs, academic excellence, impactful projects, and notable achievements
- Treat all interactions (buddy process, HR events, sessions) as evaluative
- Focus on clear communication, structured problem-solving, and coachability

Stipend: INR 1,40,000 per month

Other Information (Food , Accommodation and Travel Allowance): NA

Media.net

Profile: Software Development Engineer Intern.

About Media.net : Media.net is a leading global advertising technology company and the world's second-largest contextual advertising network by revenue, operating at the intersection of publishers, advertisers, and users. With over 1,800 talented professionals across offices in New York, Los Angeles, Dubai, Zurich, Mumbai, and Bangalore, the company develops innovative monetization products that empower quality independent media owners to thrive in the digital advertising ecosystem. Media.net leverages best-in-class contextual targeting, proprietary machine learning technology, and sophisticated data processing capabilities to deliver measurable outcomes for both publishers and advertisers.

Job Description:

Domestic(internship location- Bangalore, Mumbai), 8 weeks duration

- As an intern you will engage in product engineering efforts at Media.net and work with world class dev teams to develop game-changing, globally distributed, Web 2.0 products used by millions worldwide.
- You will be involved in the entire lifecycle of a project, including strategy, vision, design, UX, coding, architecture, deployment etc, and will be chiefly expected to deliver clean, testable and well-designed code for the same.

Eligibility criteria :

- You are acquainted with / have mastered **a few of the below skills/tools** - Java, C#, PHP, Ruby, Python, C++, Javascript, WPF, Erlang, Haskell, LISP, Linux, Flex, XUL, Bash, Advanced Networking, Async IO, Routing, TCP/UDP, Postgres, Data structures, Advanced RDBMS, MySQL, MSSQL, neo4j, BDB, REST, SOAP, IPC, RPC, HTML, CSS, Ajax, Agile, TDD, XP, Scrum, caching, Load Balancing, Horizontal Partitioning, Memcached, Multi-threading, Concurrency, Scalability, Unicode, Usability / Ux, MVC, Spring, Titanium, Ant, Watir, Selenium, Git, CVS, SVN, JIRA, ...etc.
- Knowing a programming language for DSA and system design is enough according to select students.

Shortlisting Process: Resume shortlist, test, interviews

CGPA Cutoff : -

Test :

Topics : Was on the harder side, DP and Graph Questions asked.

Test pattern: Coding questions..

GD: No

Interview:

No of interview rounds - 1 technical round and 1 HR-cum-technical round

- Rapid fire questions on DSA and system design was asked in the first round
- Questions regarding trees and DP were asked.
- resume discussion and couple of easy array questions asked in the second round. Mostly HR.

Suggestions:

- Just try to be calm. Don't compare yourself with anyone else & don't lie about anything, Be fair.
- Always speak out your thought process and be confident all the time.
- Don't worry much about companies or places of work or stipend. Apply to all companies in your field of interest, do your best in all of them and don't keep single or specific companies as targets as all companies are good. This will release pressure. Also it is possible that even if you do well , sometimes you might get rejected because of arbitrary tie breaks by some companies which are not in your hands. So just be confident to do your best.
- If stuck, try discussing your thought process with the interviewer, they'll guide you towards the correct approach.

Preparation Material:

- Preparing from leetcode, code chef, code forces, striver sheet etc.
- DSA sheet questions
- Good amount of HR interview prep

Open for:

- Btech: Computer Science
- Data Science and AI
- MS: computer science

Stipend:

Currency Type :

INR

Amount :	100000 Monthly
Other Facilities :	No
Relocation allowance	First Couple of days of accommodation taken care of.
:	
Travel allowance:	Free drop off service
Food Allowance :	Subsidised food offered

Microsoft

Profile: Software Engineering Intern.

About Microsoft : Microsoft India (R&D) Private Limited, a subsidiary of Microsoft Corporation, set up Microsoft India Development Center (MSIDC) at Hyderabad in 1998. Over the course of the past 21 plus years, we have expanded to become one of Microsoft Corporation's largest R&D centers outside its headquarters in Redmond. MSIDC is a part of Microsoft Corporation's strategy of global shared development, where teams across geographies collaborate to build great software and services. Our engineers in MSIDC contribute to the engineering of critical and important technologies in the above areas, thereby impacting millions of lives.

Job Description:

Domestic (internship location-hyderabad,noida,bangalore), 8-10 weeks duration.

Software engineers (SWEs) work with teammates to solve problems and build innovative software solutions. You are passionate about customers and product quality, and you provide technical guidance to Program Managers as they consider user needs and product requirements. You will also be expected to demonstrate an ability to learn and adopt relevant new technologies, tools, methods and processes to leverage in your solutions. As a SWE, you are dedicated to the design, development and testing of next-generation software which will empower every person and organization on the planet to achieve more.

- Applies engineering principles to solve complex problems through sound and creative engineering.
- Quickly learns new engineering methods and incorporates them into his or her work processes.
- Seeks feedback and applies internal or industry best practices to improve his or her technical solutions.
- Demonstrates skill in time management and completing software projects in a cooperative team environment.

Eligibility criteria :

- Bachelor's degree in computer science with proven experience coding in languages including, but not limited to, C, C++, C#, Java, JavaScript, or Python
- 1+ year(s) technical engineering experience with coding in languages including, but not limited to, C, C++, C#, Java, JavaScript, or Python (additional qualification)

- OR Master's Degree in Computer Science or related technical field with proven experience coding in languages including, but not limited to, C, C++, C#, Java, JavaScript, or Python
- Experience in object-oriented language.
- Ability to demonstrate an understanding of computer science fundamentals, including data structures and algorithms.
- Ability to write clean, well-crafted code with an emphasis on quality, simplicity, durability, and maintainability.
- Communicate effectively to surface progress, risks and help needed within the project team.

Shortlisting Process: Resume shortlist, test, interviews

CGPA Cutoff : 7 above

Test :

Topics: Basic DSA questions (leetcode easy level questions)

Examples:

- Questions on strings and arrays.
- Given a string containing only 'a', 'b', '?. Find the number of possible strings such that if '?' is replaced by 'a' or 'b' it should not contain 3 same consecutive letters.
- Given N dice rolls as array A . You don't remember the next k numbers. Return an array containing k numbers. AM of N+k number is given. Return k sized array that satisfies the given condition

Test pattern: 2 coding questions with hidden test cases, 1 hour given to solve.

GD: No

Interview:

No of interview rounds - 2 (1st technical, 2nd technical + general)

- Data structures and algorithms and basic object oriented programming.
- First round: basic programming questions asked. You are expected to explain and extend the logic of the coding question.
- Example questions asked in round 2: build trees using pointers.
- Programming questions with basic questions for round 1, followed by intermediate questions in round 2 (compared to Leetcode Medium level questions).

Suggestions:

- Just try to be calm. Don't compare yourself with anyone else & don't lie about anything, Be fair.
- Always speak out your thought process and be confident all the time.
- Don't worry much about companies or places of work or stipends. Apply to all companies in your field of interest, do your best in all of them and don't keep single or specific companies as targets as all companies are good. This will release pressure. Also it is possible that even if you do well , sometimes you might get rejected because of arbitrary tie breaks by some companies which are not in your hands. So just be confident to do your best.
- If stuck, try discussing your thought process with the interviewer, they'll guide you towards the correct approach.

Preparation Material:

- Preparing from leetcode, code chef, code forces, interview bit etc.
- Basic DSA... searching and sorting
- Basic Math, Logic. & Dynamic Programming

Open for:

- Btech: All
- Dual Degree: All
- Mtech: Computer Science ,Electrical engineering

Stipend:

Currency Type :	INR
Amount :	125000 Monthly
Other Facilities :	No
Accommodation :	Relocation allowance of 100000 as eligible
Travel Allowance :	Relocation allowance of 100000 as eligible
Food Allowance :	Relocation allowance of 100000 as eligible

Millennium Consulting

Profile: Quant Developer - Intern

About Millennium:

Millennium is a global, diversified alternative investment firm, founded in 1989, which manages \$67.7 billion in assets. Defined by evolution, innovation and focus, Millennium's mission is to deliver high-quality returns for our investors.

Millennium seeks to empower talented professionals with the sophisticated expertise, resources and technology to pursue a diverse range of investment strategies across industry sectors, asset classes and geographies.

Our technology division builds solutions that work to keep us ahead in an ever-changing world. We utilize advanced data analytics, AI and machine learning, cloud technology and information security to deliver a highly-sophisticated technology platform. This platform enables us to operate at a significant scale across global markets. We are seeking interns for Quant Developer roles in Fixed Income & Risk Technology, Equities Technology & Corporate Technology division.

Job Description:

Other Qualifications

- Engineering students entering their final year, pursuing a B.Tech/BS degree in Computer Science, or equivalent.
- Excellent listening, and communication (both oral and written) skills
- Self-starter and critical thinker, takes ownership of own projects and makes improvement suggestions for the entire infrastructure.
- Proactive, assertive and attentive to details, can work independently and in a collaborative environment.
- Excellent self-management and problem-solving skills. Quick learner.
- Broad understanding of equities, derivatives, futures, and FX would be a plus.

Location: India, City: Bangalore

Shortlisting Process: Resume shortlisting

CGPA Cutoff: 8+

GD: No

Test:- Had coding problems and some probability MCQs.

No of interview rounds: 5

Interview:

The interview considers your JEE rank and CGPA, it had 5 rounds with round 1 and 2 being 15 mins and other rounds almost 45 mins and each round had 1 panelist. First 2 rounds were quick; they just wanted to know if you knew the answers.

- **Round 1-** Was related to system design and logical thinking and asked a question about hashmap and api rate limiting .
- **Round 2-** was about HR.
- **Round 3-**going through dsa and resume, asked questions about dsa
- **Round 4-**was related to projects, difficulty faced during them
- **Round 5-**Was again related to hr

Preparation Material:

- DSA Sheet
- Codeforces, Leetcode, GFG
- Quant related material

Open for:

B.Tech: All branches

Dual Degree: Aerospace Engineering, Biological Engineering, Chemical Engineering, Civil Engineering, Computer Science and Engineering, Electrical Engineering, Engineering Design, Mechanical Engineering, Metallurgical and Materials Engineering, Complex Systems and Dynamics, Computational Engineering, Data Science, Quantitative Finance, Quantum Science & Technology, Robotics

Stipend:

Currency type: INR

Amount: 400000

Other information (Food, Accommodation and Travel Allowance): INR 3,50,000
(Monthly Stipend) + INR 50,000 (Relocation Allowance Monthly) = INR 4,00,000
(Total Stipend per month).

Millennium Consulting

Profile: Quant Researcher - Intern

About Millennium:

Millennium is a global, diversified alternative investment firm, founded in 1989, which manages \$67.7 billion in assets. Defined by evolution, innovation and focus, Millennium's mission is to deliver high-quality returns for our investors.

Millennium seeks to empower talented professionals with the sophisticated expertise, resources and technology to pursue a diverse range of investment strategies across industry sectors, asset classes and geographies. Be part of a new and growing team within the firm's Quantitative Strategies Central Research group. Quant research interns will explore the process of researching and developing alpha signals and related tools for global equities and futures markets using advanced mathematical and statistical techniques in conjunction with exceptional problem solving skills.

Location - Mumbai

Job Description:

Responsibilities:

- Analyze datasets using machine learning/statistical/applied math/econometric techniques.
- Research predictive signals for financial markets
- Develop and rigorously test models, and tools to support research
- Research trading algorithms for profitable implementation of models
- Review academic literature in relevant areas such as empirical finance, market microstructure, machine learning, and computational statistics

Desirable Qualifications:

- Courses in Mathematics, Computer Science, Statistics, and Machine Learning
- Projects / prior internships with machine learning and statistical applications desirable

No prior experience in the investment field is required

Required Programming Skills:

- Proficiency in at least one major programming language
- Statistical programming skills using Python or R or Matlab a plus

Shortlisting Process: Resume shortlisting and test

CGPA Cutoff: 8+

GD: No

Test:- Had coding problems and some probability MCQs.

No of interview rounds: 3

Interview:

- Interviews are a mix up of technical and personality questions.
- Focused on resume.
- Sample questions: -
 - Topological Sort
 - Cache optimisation

Suggestions:

- Soft skills matter.
- Know your resume well.
- Act formal. Be confident.
- Make a definite approach and then speak.

Preparation Material:

- DSA sheet, Leetcode, Codeforces, Leetcode, GFG.
- Quant material.

Open for:

B.Tech: Computer Science and Engineering, Mechanical Engineering, Engineering Physics, Electrical Engineering.

Dual Degree: Computer Science and Engineering, Electrical Engineering, Advanced Materials and Nanotechnology, Complex Systems and Dynamics, Computational Engineering, Cyber Physical Systems, Data Science, Quantitative Finance, Quantum Science & Technology, Robotics

Stipend:

Currency type: INR

Amount: 400000

Other information (Food, Accommodation and Travel Allowance): INR 3,50,000
(Monthly Stipend) + INR 50,000 (Relocation Allowance Monthly) = INR 4,00,000
(Total Stipend per month)

Morgan Stanley

Profile: Sales and Trading – Fixed Income Division

About:

Morgan Stanley is a leading global investment bank and financial services firm operating in more than 42 countries. Renowned for its client-first approach, innovative thinking, and ethical leadership, Morgan Stanley's five core values define its culture:

- Do the Right Thing
- Put Clients First
- Lead with Exceptional Ideas
- Commit to Diversity & Inclusion
- Give Back

About the Fixed Income Division (FID): The Fixed Income Division specializes in interest rates, credit, and currency markets. It provides trading, advisory, and market-making services to a wide range of global institutional clients. The division supports client execution and helps manage risk across fixed income markets by leveraging advanced analytics, market insight, and valuation expertise.

Job Description: The internship is a comprehensive 10-week in-office program that includes structured rotations and immersive desk experiences across key verticals within FID:

- Sales & Client Management
- Trading & Execution
- Structuring & Valuation
- Analytics & Strategy

Interns undergo formal orientation, desk-level training, and engage in multiple networking and speaker sessions with senior leadership. The internship provides an excellent opportunity to experience how global markets operate and how cross-functional teams collaborate to deliver client-centric solutions.

Location: Mumbai

Responsibilities include:

Sales:

- Support client acquisition and relationship building
- Pitch investment ideas and market views
- Assist in cross-selling fixed income products

Trading:

- Monitor market movements and assist with trade execution
- Analyze trading strategies and market trends
- Conduct real-time market research

Structuring:

- Build pricing models for fixed income instruments
- Perform risk-return assessments for structured products

Analytics:

- Prepare revenue and profitability reports
- Assist with internal business strategy and planning

Essential Skills:

- Strong quantitative and analytical skills.
- Knowledge of core finance and economic principles.
- Interest in financial markets and trading.
- Strong communication and articulation skills.
- Team-oriented with problem-solving mindset

Shortlisting process:

Degrees: B.Tech / Dual Degree / MA / MSc

Backgrounds: Finance, Economics, Engineering, Mathematics

Year: Penultimate year

CGPA Cutoff: 8.0+ preferred

Interview Process –**Round 1:** Online Test

- Sections: Probability, Aptitude, Verbal Comprehension
- DSA-focused coding problems
- Pronunciation and spoken English assessment

Rounds 2–4: Interviews (3–5 rounds total)

- Round 1 (Technical/Quant):
 - Dice simulations, puzzles (e.g., horse race)
 - Questions on bond performance drivers
- Round 2 (Case-Based):
 - Real-world case discussions (e.g., Zomato IPO, tea vendor revenue strategy)
 - Portfolio analysis and client scenarios
- Round 3 (HR):
 - Behavioral questions
 - "Why Sales & Trading?" / "Why Morgan Stanley?"

Preparation Material & Suggestions –

Concepts:

- Intro to Probability – Bertsekas
- Heard on the Street (Quant interview guide)
- Principles of Economics
- Brainstellar puzzles (focus on probability and logic)

Coding:

- Practice on LeetCode, NeetCode, InterviewBit
- Striver's DSA Sheet

Soft Skills:

- Case thinking and structured problem-solving
- Verbal clarity and articulation

Key Tips:

- Demonstrate genuine interest in financial markets
- Ensure strong understanding of resume and projects
- Begin preparation early due to the diversity of topics
- Emphasize communication and structured thinking

Open for:

B.Tech / Dual Degree – All Branches

M.A. / M.Sc. – Finance, Economics, Statistics, Mathematics

Stipend (INR): ₹165,000/month

Other Information: Travel and accommodation provided during the internship

Morgan Stanley

Profile: Fixed Income Division – Strats & Quants

About:

Morgan Stanley is a leading global investment bank and financial services firm operating in more than 42 countries. Renowned for its client-first approach, innovative thinking, and ethical leadership, Morgan Stanley's five core values define its culture:

- Do the Right Thing
- Put Clients First
- Lead with Exceptional Ideas
- Commit to Diversity & Inclusion
- Give Back

Job Description:

The Strats & Quants team integrates quantitative modeling, programming, and financial theory to support the Fixed Income Division. Interns work on real-world problems in pricing, risk management, and analytics, contributing to tools and strategies used by traders and structurers globally.

Interns will:

- Build and test pricing and risk models (e.g., Monte Carlo simulations)
- Develop core analytics libraries and trading tools
- Apply machine learning to trading use-cases
- Create dashboards and web-based risk tools
- Collaborate with teams across New York, London, and Asia

Location: Mumbai

Roles and Responsibilities:

- Build pricing, risk, and statistical models
- Optimize trading infrastructure using Python, C++, or JavaScript
- Contribute to web-based analytics dashboards
- Apply probability, numerical methods, and ML to real trading systems
- Work on cross-functional projects with global teams

Skills Required:

Technical:

- Programming: Python / C++ / JavaScript
- Databases: SQL / KDB (bonus)
- Quantitative Skills: Probability, Statistics, Optimization
- Financial knowledge is a bonus

Soft Skills:

- Strong communication
- Fast learner and collaborative mindset

Shortlisting process:

Degrees: B.Tech / Dual Degree / MA (All branches), Disciplines Preferred: CS, Mathematics, Physics, Economics

CGPA Cutoff: 8.5–9.0 preferred

- **Resume Shortlisting:** Based on academic record, technical skills, and relevant project experience
- **Online Test-** Topics: Monte Carlo simulations, probability, DSA, finance fundamentals

Interview Process –

Number of rounds – 3

- Round 1 – Quant/Probability:
Monte Carlo problems, logic puzzles, math-heavy questions
- Round 2 – DSA + Projects:
Optimization problems, code walkthrough, resume deep dive
- Round 3 – HR/Behavioral:
Career goals, fit for team, communication and collaboration

Preparation Materials:

- Quant & Finance: Heard on the Street, 50 Problems in Probability, Hull's Derivatives (optional), MIT OCW: Quantitative Finance
- Coding: LeetCode, Codeforces, Focus on Dynamic Programming, Graphs, Optimization

- Courses That Help: Probability & Statistics, Numerical Methods, Machine Learning for Trading

Suggestions:

- Finance experience is helpful but not mandatory
- Be confident with applied math and coding logic
- Clear communication of your problem-solving approach is critical
- Curiosity and structured thinking matter as much as technical skills

Stipend: ₹1.5–1.65L/month

Perks: Travel + Accommodation provided

Nutanix

Profile: Member of Technical Staff

About:

Nutanix is a global leader in cloud computing and enterprise infrastructure solutions. Founded in 2009, it pioneered hyper-converged infrastructure (HCI), simplifying data center operations by integrating compute, storage, and networking into a single software-defined platform. Nutanix enables businesses to seamlessly manage private, public, and hybrid cloud environments with agility and scalability. Its flagship product, the Nutanix Cloud Platform, delivers high performance, reliability, and security for modern workloads. The company serves industries ranging from finance to healthcare, empowering digital transformation. Known for its innovation, customer-centric approach, and strong engineering culture, Nutanix continues to be a key player in enterprise cloud solutions.

Job Description:

You will work on the design and development of a large-scale, high-performance, hybrid/multi-cloud network product. Contribute across the full software development lifecycle, from concept to deployment, with a focus on scalability, resilience, and performance.

Responsibilities Include:

- Designing and developing distributed, resilient, high-performance software.
- Contributing to all phases: conception, design, implementation, deployment, and performance tuning.
- Writing robust, reusable code and unit tests using an API-driven approach.
- Collaborating with cross-functional teams (Developers, Testers, Product Managers, Support).
- Reviewing and contributing to product requirements, code, test plans, and performance/scalability assessments.
- Taking ownership of product features and delivering independently with minimal supervision.

Skills Required:

- Education: BE/BTech/ME/MTech or equivalent in Computer Science.
- Experience: 0+ years (entry-level/internship role).
- Programming: Strong command of C/C++/Java/Golang; advanced memory management and multithreading are a plus.
- Core CS Fundamentals:
 - Operating Systems
 - Distributed Systems / Databases
 - File Systems
 - Multi-threaded / Multi-process applications
 - Inter-process communication
 - Object-Oriented Programming
 - Algorithms, Data Structures, and Problem Solving
- Additional Knowledge (Preferred):
 - Linux Kernel Internals
 - Open Source tools/projects
 - Networking, virtualization, and cloud computing

Shortlisting process:

Test and two technical rounds of interviews

CGPA cutoff: 8+ CGPA

Test Pattern: Focus on DSA, Programming language used: C++

GD: No.

Interview Process -

Number of rounds - 2 technical rounds

Focus Areas: In-depth C++ understanding, problem-solving (DSA), clarity of thought and communication.

Suggestions -

- Be clear and structured in presenting solutions.
- Show enthusiasm and a willingness to learn.
- Focus on DSA fundamentals and coding in C++.
- If starting over, spend more time practicing DSA.

Preparation Material:

- DSA problem sheets (shared internally)
- General prep for SDE roles (no specific prep)
- Language focus: C++

Open for:

Btech: Computer Science and Engg., Electrical Engineering

Dual Degree: Computer Science and Engineering, Electrical Engineering

M.Tech / M.S: Computer Science and Engg. , Electrical Engineering (Communications, Networks & Signal Processing, Control Engineering and Optimization, Electronic System Design and Instrumentation, Integrated Circuits & Systems, Micro Electronics & VLSI Design, Power Systems & Power Electronics, Quantum Science and Technology, RF, Optics & Photonics)

Stipend (INR) - 110,000 (monthly)

Other Information (Food , Accommodation and Travel Allowance): As a benefit of your internship with the company, you will receive the following : a) Two way economy airfare/bus/train b) Temporary living arrangements for 14 days of accommodation.

NK Securities

Profile: Quantitative researcher

Location: Gurugram, Haryana.

Stipend:

- **Currency type:** INR
- **Amount:** 450000 / month
- **Other Facilities:**
 1. **Accommodation:** Covered
 2. **Travel Allowance :** Covered (air tickets including).
 3. **Food Allowance :** covered
- **Duration: 8 weeks (May-July)**

About NK Securities:

NK Securities Research is a leading financial firm that leverages cutting-edge technology and sophisticated algorithms to trade the financial markets. Founded in 2011, we have gained invaluable experience in the field of High-Frequency Trading across different asset classes.

Job Description:

As a **Quantitative Researcher Intern**, you'll develop and refine trading models, analyze large financial datasets to spot trading opportunities, and provide analytical support to traders, while also building predictive models for market trends. The ideal candidate is analytical, skilled in C++ or C, familiar with Linux, Python, and shell scripting, and has a strong problem-solving mindset and excellent communication. You'll work in a fast-growing, startup-style environment with opportunities to collaborate with industry veterans, and **outstanding interns may receive a Pre-Placement Offer**.

Qualifications and Required skills:

- Strong analytical skills
- Hard-working and strong work ethic
- Programming experience in C++ or C
- Proficiency in using Python, R, or Matlab for statistical or data analysis of HFT tick data
- Excellent communication skills

Benefits:

- NK Securities Research offers compensation above industry standards

for deserving candidates.

- Exceptional performance is rewarded with a handsome variable bonus going up to 100% of the fixed compensation.
- We are a fast-growing organization where there is no ceiling on the career trajectory of an individual.
- The startup-style governance of the firm enables the newest employees to work with industry veterans.
- Our focus is on premium quality of life, and we encourage everyone in the firm to thrive in all aspects of their lives.

Shortlisting process:

Resume shortlist

Test (Coding)

Interview

[The CP rating was also taken into consideration.]

CGPA cutoff: 8+ CGPA was the general cutoff.

Tests:

- There was a coding test conducted that mostly focused on typical array-based problems (where n^2 is easy but $O(n)$ is challenging) and other graph problems.

it included two questions for coding part (one OOP and one CP for DSA)

- It includes a Multiple Choice question from Probability.

Test Requirements:

- Strong Analytical Skills
- programming experience in C++ or C
- Working knowledge of Linux, Python, and shell scripting

GD: No

No. of Interview Rounds: 2

Interviews:

- There were two interviews conducted in which they asked quant- and probability-based puzzles. They were quite helpful in giving hints and helping us think whenever we were stuck somewhere.
- For software roles, they focused on computer architecture (cache

memory, pipeline processor) and asked a lot of questions about OOPS. They also asked about a couple of CP problems: medium and hard (one each).

- Problem-solving skills and the approaches used for solving a problem were heavily tested in each stage of the interview. For software, it was quite straightforward, based mainly on core CS courses.
- For CP problems, they just wanted to know your approach. OOPS, and the architecture stuff was just knowledge-based.

Suggestions:

- Before jumping into the question during the interviews - first understand it really well and construct a framework inside your mind.
- Start competitive programming as early as possible, preferably in the first year itself.
- In the second year, focus on improving problem-solving skills and practicing probability-based questions.
- Doing architecture courses in CS and/or MA courses on probability could help you get shortlisted for the interview.
- If you plan well enough in the 2 months of summer vacations, then that is sufficient time for a good level of preparation.

Preparation material:

- For quant roles, puzzles from Brainstellar would help.
- Probability questions: a book called "50 Problems in Probability" and revising the MA2040 (probability and stochastic processes) notes
- Software: Just practice some CP problems from Codeforces, CodeChef, and Leetcode.
- Soft skills: Youtube videos

Open for:

B.Tech: Computer Science and Engineering, Electrical Engineering.

Dual Degree: Computer Science and Engineering, Electrical Engineering, Data Science, Computational Engineering, Quantitative Finance, Robotics.

NK Securities

Profile: Software development (infrastructure) engineer

Location: Gurugram,Haryana.

Offers: 1

Stipend:

- Currency type: INR
- Amount: 450000 / month
- Other Facilities:
 1. Accommodation: Covered
 2. Travel Allowance : Covered (air tickets including).
 3. Food Allowance : covered
- Duration: 8 weeks (May-July)

About NK Securities:

NK Securities Research is a leading financial firm that leverages cutting-edge technology and sophisticated algorithms to trade the financial markets. Founded in 2011, we have gained invaluable experience in the field of High-Frequency Trading across different asset classes.

Responsibilities:

- Implement high-frequency automated trading systems.
- Optimize trading systems by using networks and systems programming.
- Do Research and development of algorithms to reduce the latency of trading systems.
- Build risk-management and performance-tracking tools.
- Be responsible for modules including research, design, development, deployment, optimization and support.

Qualifications:

- A strong background in C/C++ programming, object-oriented programming, data structures and algorithms
- Working knowledge of Linux
- Working knowledge of Python and shell scripting

- Excellent problem-solving abilities
- Excellent communication skills
- Any of the following is a plus:
 - An understanding of TCP/IP and Ethernet
 - Familiarity with parallel programming models and parallel algorithms
 - Experience in the HFT industry
 - Financial experience is not required but an interest in financial markets is a plus.

Benefits:

- NK Securities Research offers compensation above industry standards for deserving candidates.
- Exceptional performance is rewarded with a handsome variable bonus going up to 100% of the fixed compensation.
- We are a fast-growing organization where there is no ceiling on the career trajectory of an individual.
- The startup-style governance of the firm enables the newest employees to work with industry veterans.
- Our focus is on a premium quality of life and we encourage everyone in the firm to thrive in all aspects of their lives.

Shortlisting process: • Resume shortlist

- Test (Coding)
- Interview

[CP rating was also taken into consideration]

CGPA cutoff: 8+ CGPA was the general cutoff.

Tests:

- There was an objective coding test
- It was based almost entirely on topics like data structures and algorithms, probability, OOPS etc.

GD: No

No. of Interview Rounds: 2

Interviews:

- They were gauging the depth of knowledge and your application skills.
- Like in the tests, the questions were majorly on data structures and algorithms, probability, OOPS etc.
- These are some questions which were asked:
- Two arrays are given, create another array of the same size, by choosing one of the elements from the same index, find the length of the longest non decreasing subarray formed.

Static virtual functions.

Given a square table, two players place one coin after another. Tell a strategy so that the first player always wins. Placing one coin on top of another coin is not allowed.

Suggestions:

- Do not stress out, just give your best and do not think about anything else.
- Starting early will give you more time to prepare, but ultimately, the way you're preparing matters more. Even in a short span, one can prepare efficiently.
- Practice tough questions.
- Prepare for Quant questions like probability and riddles.

Preparation material:

- For coding - Leetcode and gfg (refer to cp problems), CodeForces (not that imp. but good to have).
- For probability related questions - 'Heard on the Street', 'Fifty problems in probability', 'Zetamac' (for mental math), 'BrainStellar' etc.

Open for: **B.Tech:** Computer Science and Engineering, Electrical Engineering
Dual Degree: Computer Science and Engineering, Electrical Engineering
IDDD: Data Science

Profile: Automation Testing

About Ola:

Today Ola is amongst the world's leading mobility companies serving 200 million customers all across India. Ola's EV business is the next step in their mission to move the world to sustainable mobility. To accelerate this, they're investing nearly Rs 2,400 crores to build the world's largest two-wheeler factory near Krishnagiri, Tamil Nadu. A testament to Indian manufacturing and the 'Make in India' mission, this factory will be their global hub from which serve not just our home market in India but also export to their key markets across Europe, UK, Australia, New Zealand, and Latin America.

Job Description (as given by Ola):

We are looking for a skilled Software Developer with experience in Python or Java to join our team. The ideal candidate will demonstrate ownership through relevant projects and possess strong problem-solving skills. This role involves developing and maintaining software applications, taking initiative in project management, and contributing innovative solutions. An interest in robotics and embedded systems is a plus.

Key Result Areas :

- Software Development: Design, develop, and maintain applications using Python or Java, ensuring high-quality and scalable code.
- Project Ownership: Manage and drive assigned projects from start to finish, ensuring timely delivery and adherence to project scope.
- Problem Solving: Apply analytical skills to address complex issues, troubleshoot problems, and implement effective solutions.
- Personal Projects: Utilize experience from personal software development projects to bring fresh ideas and solutions to the team.
- Collaboration & Communication: Work effectively with team members and stakeholders, providing clear updates and technical insights.
- Interest & Knowledge: Show a keen interest in robotics and embedded systems, staying informed about relevant trends and technologies.

Competency Requirements:

- Technical Proficiency: Strong experience with Python or Java, demonstrated through relevant projects or professional work.

- **Analytical Skills:** Ability to analyze complex problems, develop innovative solutions, and apply logical thinking.
- **Project Management:** Experience managing software projects, with a proven track record of taking ownership and delivering results.
- **Problem Solving:** Proficiency in troubleshooting and resolving software issues effectively and efficiently.
- **Communication Skills:** Excellent verbal and written communication skills to articulate technical concepts and project statuses clearly.
- **Adaptability:** Ability to quickly learn new technologies and adapt to evolving project requirements.
- **Interest in Robotics and Embedded Systems:** Enthusiasm for robotics and embedded domains, with a proactive approach to exploring and learning about these areas.

CGPA Cutoff: No official CG cutoff for registration [8.5+ recommended]

No of interview rounds -

1 Technical Round, 1 HR Round. (Both online, last year)
There was NO GD.

Interview: (short, 15-25 minutes for technical Round, 30 minutes for HR round)

- Technical interview was relatively easy. Expected to be more difficult this time around.
- Knowledge of ML, and Python. They were not really going for a Web Development profile.
- Basic Python questions, basic logical questions, and then questions on the particular resume.
- Some puzzles were asked, very basic logical reasoning.
- In the HR round, detailed description of things in the resume. Tell them about yourself in brief, which would also include the points mentioned in the resume from A-Z. Personal hobbies, and all of that .Did not expect the people to have prior knowledge of Ola.

Suggestions:

- Questions in DSA's don't go beyond arrays or trees. However, a good understanding of both was required.
- Some ML projects are recommended to be there in the resume.
- Languages like Python and C++ should be known.
- The work may not be exactly as the description suggests, so more general work might be assigned that might not be directly related to the role, hence more scope.

Preparation Material:

- General material for ML. Youtube.
- For DSA, GeeksForGeeks, Youtube.

Open for:

- Btech: All branches
- Dual Degree: All branches

Stipend: ₹1,00,000 monthly

Profile: Founder's Office - Business Strategy

About Ola, note by Founder:

Today Ola is amongst the world's leading mobility companies serving 200 million customers all across India.

At Ola, our vision is to build the technologies of the future. With technology in our DNA, we are focused on building business of global impact out of India, for the world. I firmly believe that it is India's destiny and a golden opportunity to build world-class products, and it is our generation's responsibility to make this vision a reality for our nation. Ola's brand ethos is centered around impact and purpose-driven development of businesses. We embrace the culture of impact and empower our colleagues with the spirit of true entrepreneurship. We are on a pursuit to discover the best talent, offering them diverse opportunities to spearhead high-impact projects.

Job Description (as given by Ola):

Looking for a purpose driven individual to join my office and work closely with me, contributing to the company in achieving its goals. I want to build a team of co-pilots to dedicatedly work with me and the leadership across verticals. You will be working with the best pool of talent, helping steer development of cutting edge products and services. Working at Ola would mean that you will define the company's vision & strategy as well as help make it a reality. With immense growth opportunities, you will be an integral part of the decision making team at the leadership level, helping us achieve speed and scale of operations.

CGPA Cutoff: No official CG cutoff for registration

No of interview rounds -

Single round of interview.

Interview:

- Generic HR interview, questions on previous internships were asked.
- Day in the life of the interviewee, hobbies, etc. were asked.

Open for:

- Btech: All branches
- Dual Degree: All branches

Stipend: ₹1,50,000 monthly

Profile: Computer Vision Engineer

About Ola:

Advanced Systems group at Ola is building some of the exciting products and cutting edge technologies in the world. We are developing Autonomous Driving Technologies for our Electric Vehicle for very challenging driving conditions of India. Our approach to Autonomy is built and rooted in some of the latest advances in Artificial Intelligence such as Reinforcement Learning, Embodied Intelligence, Imitation Learning and Large language models.

Job Description:

Responsibility:

- Build robust solutions to cutting edge Autonomous driving perception, planning and control problems
- Develop cutting-edge algorithms using Deep Learning, Machine Learning and Reinforcement Learning
- Keep pace with the latest research in Computer Vision, Deep Learning, Reinforcement Learning and Machine Learning

Minimum Qualifications

- Bachelors/Masters/PhD in Computer Science, Electrical Engineering, Mathematics
- Experience in Deep Learning, Computer Vision, Machine Learning
- Strong Mathematical foundations in Calculus, Linear Algebra, Probability Theory and Optimization

Preferred Qualifications

- Experience with classical Computer Vision, understanding of multi-view geometry and Deep Learning
- Strong understanding of networks such as CNNs and Vision Transformers
- Experience with Camera Calibration, Visual Odometry, Object Detection, Tracking and Sensor fusion
- Experience working with multiple sensor modalities such as Lidars, Radars, Stereo and Monocular Cameras

- Ability to develop novel network architectures, design and develop loss functions
- Experience working with frameworks such as OpenCV, TensorFlow, PyTorch
- Working in a fast-paced start-up environment and solving challenging problems
- Experience working with sensors such as GPS, OBD, IMU, Radar would be a major plus
- Potential to publish papers in conferences such as NeurIPS, CVPR, ICLR, IROS

Shortlisting Process: Resume shortlisting

CGPA Cutoff: N/A

GD: No

No of interview rounds: 2 (1 Technical + 1 HR)

Interview:

- Technical interview was mostly based on the resume.
- Planning Algos, Basic controls, basic cvi and basic image processing was asked too.

Preparation Material:

- Computer Vision courses like cs231n.

Open for: B.Tech: All Branches.
Dual Degree: All Branches.

Stipend: INR 1,25,000 per month.

Ola

Profile: Product Development

Location: Bangalore

About Ola:

Today Ola is amongst the world's leading mobility companies serving 250 million customers across 3 continents. Ola's EV business is the next step in their mission to move the world to sustainable mobility. To accelerate this, they're investing nearly Rs 2,400 crores to build the world's largest two-wheeler factory near Krishnagiri, Tamil Nadu. A testament to Indian manufacturing and the 'Make in India' mission, this factory will be their global hub from which serve not just our home market in India but also export to their key markets across Europe, UK, Australia, New Zealand, and Latin America.

Job Description:

n/a

CGPA Cutoff: No official CG cutoff for registration.

No of interview rounds -

1 Introductory, Case Study Based Round, 1 HR Round. (online)
There was NO GD.

Interview:

- Case study, they explain how a case study based question works, and then explain the format in which they wish the interviewee should answer.
- Interviewer is helpful, it's more of a guided case study.
- Questions related to resume.
- General HR questions.

Suggestions:

- Practice case studies with friends, discuss it in a group.
- Confidence in answering their questions.

Open for:

- All B.Tech and Dual Degree students.

Stipend: ₹1,25,000 monthly

By Utkarsh Maurya

Ola

Profile: Silicon and Cloud Software Developer

About Ola (Krutim):

Building AI computing for the future, Krutrim, a part of the Ola group, has new ideas which have a way of becoming extraordinary products, technologies and customer experiences very quickly. Bringing passion and dedication to your job with everyday learning, growth, creativity, and innovations. Dynamic, smart people and inspiring, innovative technologies are the norm here. We are building the future of AI, Supercomputers, and Autonomous driving, to be an integral part of it. Learn, contribute, create, and grow with us. You will have an amazing experience defining the frontiers of AI and Autonomous driving technologies and products.

Job Description (as given by Ola):

Join a world-class team of engineers to work on cutting-edge projects in areas like:

- **Firmware Design & Boot/Security Software**
- **Linux Kernel & CPU Software for new architectures**
- **AI/ML Model Optimization & Workloads**
- **Containerization, Orchestration & Automation**
- **Software Integration, Debugging & Validation**

Qualifications:

- Experience or interest in **software development, scripting, validation**
- Knowledge of **Assembly, C/C++, Python, Perl**, would be a plus
- Exposure to **AI/ML frameworks**
- Strong **teamwork and cross-functional collaboration** skills

- Currently pursuing a **Bachelor's or Master's** in CE, CS, EE, IT, or related fields

What you'll do:

Tackle real-world challenges, contribute to upcoming products, and learn fast. You'll need initiative, technical strength, and strong communication skills to succeed independently and collaboratively.

CGPA Cutoff: No official CG cutoff for registration

- CG 8.5+ is recommended.

No of interview rounds -

1 Technical Round, 1 HR Round.

Interview:

- Decent amount of questions related to DigSys and Analog Systems were asked.
- Questions from the particular resume were asked, the interviewer made sure that the interviewee knew about every domain stated about in the resume.
- Knowledge about OOP's, questions on pointers were asked.
- Something about power optimization was asked in the interview of the placed student, but that was probably due to his resume.
- HR asked him what he would choose to change in his course projects, in Digsys and Analog labs.
- HR was open to questions about the company.
- Didn't really go that deep into questions, just made sure the interviewee knew what they were talking about.

Suggestions:

- Digital Systems and Analog Systems(refer to the college courses) should be prepared.
- C, C++ knowledge comes in handy.
- Linux, programming modules helped.
- Strong knowledge of pointers, stack spaces, writing onto registers, intermediate competitive programming knowledge would help.
- Knowing kernel modules and their programming would be a huge boost, Linux basic commands would help.

- This intern would help greatly for embedded software, and general software roles.

Open for:

- Btech: All branches
- Dual Degree: All branches

Stipend: ₹1,50,000 monthly

Work is in Bangalore, PGs are ample near the work location, but have to pay for it yourself.

Office of Alumni Relations, IIT Madras

Profile: Marketing

About:

The Office of Alumni Relations at IIT Madras serves as a vital link between the institute and its global alumni community. Its mission is to foster lifelong engagement by building meaningful connections among alumni, students, faculty, and the institute. The office coordinates alumni outreach, organizes reunions and networking events, manages alumni databases, and facilitates fundraising initiatives that support institutional development. Through initiatives like the IITM Alumni Association, Alumnite, and various mentorship programs, the office plays a key role in leveraging the strength and success of IITM's alumni to enrich the institute's ecosystem.

Internship Location: Office of Alumni & Corporate Relations, 2nd Floor, ICSR Building, IIT Madras

CGPA Cut-off: None

Branch Specification: Open to All

Stipend: ₹320 per hour (maximum 160 hours per month)- approximately 50,000 rupees

What You Do as a Marketing Intern:

- Conceptualize marketing campaigns for retail fundraising from individuals and corporations.
- Create compelling content (text, video, graphics, banners, etc.) for emails and social media platforms.
- Carry out research on best practices in crowdfunding and marketing campaigns used by top-ranking educational institutes.
- Communicate with alumni through emails, phone calls, or in-person meetings.
- Assist in the conduct of alumni and corporate-related events.

Skills That Helped:

- Understanding of marketing terms (e.g., click rate) and email campaigning.
- Design and marketing skills using Canva and other design software.
- Basic knowledge of marketing strategies.
- Familiarity with CRM tools like HubSpot.

Recruitment Process:

Test: (Duration: One hour per role.)

- Format: It was a Google form test with about 20 questions in CRC . Mainly focused on questions related to marketing and campaign strategies.
- Sample Questions:
 1. What does marketing mean to you, and how is it relevant to the work of the Office of Alumni & Corporate Relations at IIT Madras?
 2. What types of causes or projects do you think would encourage alumni to donate to their institute?
 3. Do you have any experience in creating or managing mass email or fundraising campaigns? If yes, please describe briefly. Also, how would you measure the success of such a campaign?
 4. Important points to be kept in mind while designing an email.
 5. What are the top three reasons you believe you are a strong candidate for this internship?

Interview: (Duration: 15–20 minutes.)

It focused Mainly on marketing skills and knowledge of the candidate

- Included situation-based questions and general awareness about the functioning and goals of the ACR office.
- Interviewers also asked about relevant Positions of Responsibility (PORs). (Prior marketing experience helped build credibility.)
- Sample Questions:
 1. Say you are making a poster asking for donations for student scholarships to be sent to alumni. What will you add in the poster to catch their attention?
 2. What is the role of the ACR office? What new things can you include or suggest?

Note:

There were no technical questions in either the test or the interview rounds.

Office of Alumni Relations, IIT Madras

Profile: Project Monitoring Intern

About:

The Office of Alumni Relations at IIT Madras serves as a vital link between the institute and its global alumni community. Its mission is to foster lifelong engagement by building meaningful connections among alumni, students, faculty, and the institute. The office coordinates alumni outreach, organizes reunions and networking events, manages alumni databases, and facilitates fundraising initiatives that support institutional development. Through initiatives like the IITM Alumni Association, Alumnite, and various mentorship programs, the office plays a key role in leveraging the strength and success of IITM's alumni to enrich the institute's ecosystem.

Internship Location: Office of Alumni & Corporate Relations, 2nd Floor, ICSR Building, IIT Madras

Stipend: ₹320/hour (max 160 hours per month) approximate 50,000 rupees

What you do as a Project Monitoring Intern:

- Monitor the status of projects supported by corporates and individuals (alumni & non-alumni).
- Interact with faculty, staff, Centres of Excellence, and project owners to obtain information.
- Update project status on the CRM platform or any similar project monitoring tool.
- Work with cross-functional teams such as the Accounts & Deployment Team, Donor Stewardship Team, etc.
- Prepare reports and presentations.
- Ideate and conduct alumni events.

Skills that helped:

- Experience in people and event management adds credibility to the candidate.
- Good communication skills.
- Practice situation-based or guesstimate questions.
- Basic knowledge of software like Canva, HubSpot, etc.
- Familiarity with management terms and concepts.

Test (One hour for each role):

It was Conducted via Google Forms in CRC, about 20 questions.

- Questions were based on roles and responsibilities and included situation-based questions and management concepts.

Sample Questions:

1. How would you conduct a kickoff meeting to ensure all stakeholders are aligned on objectives and deliverables?
2. What approach would you take to outline a project's boundaries and prevent ambiguity in its scope?
3. If your team is facing multiple deadlines simultaneously, how do you decide which tasks to address first?
4. Suppose a project team member consistently underdelivers—how would you address the issue without impacting team morale?
5. In what ways does a visual scheduling tool like a Gantt chart support better planning and execution in complex projects?
6. What is a "risk register," and how is it used?

Interview (15–20 minutes):

It was based on the resume and also common HR questions. Also be familiar with the functioning of the ACR office and what it does.

- Questions also focused on extracurricular activities.
- Relevant questions regarding PoRs (Positions of Responsibility) were also asked. Management PORs helped candidates gain credibility and required skill sets.

Note: There were no technical questions in either the test or the interview rounds.

Oracle

Profile: Project Intern - Member Technical Staff

About Oracle:

Oracle Server Technologies is the flagship R&D division within Oracle that delivers industry leading software products and platforms like Cloud Infrastructure, Database, Middleware and Enterprise Manager. In India, Server Technologies group engages in development of Cloud Services, Infrastructure products and other Product Life Cycle engineering work in all product areas mentioned above and more.

Job description:

Location: Bangalore, Hyderabad; Duration: 8 weeks

Solve the kind of enthralling, high-scale challenges that engineers live for. You will: Design, Development, Testing and Troubleshooting of Oracle's Platform and Platform Cloud Services including Big Data, Analytics, Business Intelligence, Database Cloud, Mobile Cloud, Collaboration Cloud, Business Process Automation, Integration Cloud and Security Cloud Services.

Departments in BTech for the role are:

- Computer Science and Engineering
- Electrical Engineering
- Engineering Physics

Departments in Dual Degree eligible for the role are:

- Computer Science and Engineering
- Electrical Engineering
- Computational Engineering
- Data Science

Link to brochure:

<https://drive.google.com/file/d/1dklg-3W30iDPT8nGCEOEAcFM0pO8bEX9/view?usp=sharing>

Tests:

Duration: 2 hrs

Difficulty level: some questions were on topics that haven't been taught, but overall medium difficulty (MCQs were easy, coding questions were also manageable)

Description:

35 questions with 1 or 2 coding questions within them

MCQs- covered topics like DSA, OOPS, networks, OS, SQL etc.

Coding questions - medium level difficulty - one question was based on "DP on trees".

Interviews:

Number of rounds: 3

The contents of the rounds were entirely based on the interviewer present.

Contents of the rounds:

1. Puzzle-type questions (easy)
2. Asked about the projects mentioned in the resume.
3. C++ OOPS, different features, class objects, function overloading etc.
4. Asked how Instagram worked on a high-level basis, its different features, possible implementations.
5. Industry related applications of DSA were mentioned, and an attempt to implement them.
6. Coding questions: the questions were
 - a. Merging two linked lists, followed by sorting the formed linked list.
 - b. Searching in a dictionary, related problem.

GDs: Not conducted.

Points to be noted:

1. Focused more on the approach to any given problem rather than solely basing on the coding aspect.
2. The interviews were highly personalised - everyone had a different kind of interview.
3. They check if the person is knowledgeable with the courses that he has learnt.

Preparation Materials:

1. DSA sheets
2. Leetcode medium+hard level problems practice

Suggestions:

1. Be confident while in the interview.
2. Be strong in C++ OOPS, including the theory aspect, not only the algorithms part.

Stipend:

Amount: 100000 INR

Stipend type: Monthly

Other information: Relocation as applicable.

Premji Invest

Profile: Intern-Frontend Development

Type of Offer :Domestic

Nature of Profile :Finance

Type of Internship :Summer

Total Duration :8 (In Weeks)

Mode Of Internship :In-Office

Internship Location :Bangalore

About Premji Invest: Premji Invest is a venture capitalist firm. The role pertains to the Data Science team whose mandate is to transform the research methodology from fundamental to Quantamental which uses Quantitative insights and rigorous data analysis to make investment decisions. We are looking for a front-end developer for the ongoing projects related to building cloud-based database and analytics infrastructure for the public markets team.

Job Description:

The role pertains to the Data Science team whose mandate is to transform the research methodology from fundamental to Quantamental which uses Quantitative insights and rigorous data analysis to make investment decisions. We are looking for a front-end developer for the ongoing projects related to building cloud-based database and analytics infrastructure for the public markets team. Some of the key responsibilities of the front-end developer will include:

- Creating front-end UI for the applications being developed by the Data Science team for different stakeholder groups across the organization that will facilitate assessing and enhancing the performance of portfolios across the fund and aid financial research.
- Collaborate with the stakeholders to take the business requirements accurately and bake in the UI to ensure better adoption and ease of usage by them.
- Collaborate internally with backend development to optimize the overall performance of the applications rolled out to the different teams of Database specialist, developing pipelines for ingestion of multiple datasets from various vendors into the cloud database
- Assisting in creation of robust ETL jobs for the ongoing automated ingestion of the datasets along side the Database specialist
- Working alongside Quantitative researchers to develop interactive and real-time retrieval dashboards for PMs and traders that will directly impact the investment decision-making
- Creating data visualization toolkit for enhancing the ease of extracting insights and locating value amidst the abundance of data

Test Requirements: Required Qualifications

- Pre-final year of Bachelor's/Dual Degree in Computer Science, EE, Maths and Data Science
- Good programming experience with at least one modern language such as Java, C++, or C# including object-oriented design
- Experience with UI/UX development – technologies like React and Angular • Experience with web-development, proficiency in angular, HTML/JavaScript/CSS
- Experience with SQL and dealing with databases
- Sought out knowledge source in: Computer Science fundamentals in object-oriented design, data structures, algorithm design, problem solving, and complexity analysis
- Advanced proficiency in Python from a development perspective

CGPA cutoff- nil

RESOURCES:-

- Hackerrank
- Dsa sheet (javascript based)
- CSS sheet

Suggestions:

- Should know JavaScript, html, react. CSS or tailwind, bootstuff for bonus.

Selection process:-

1. Resume shortlist was rigorous.
2. Test
3. 2 rounds of interview, technical and HR
4. Interviews were very specific about the roles, other projects did not matter much
5. HR round was only conducted if students did well and were able to solve the DSA questions they give in interview

Questions asked:-

- In the test, basic html and css questions were asked followed by dsa questions in javascript.
- There was also a question on react with high weightage where the asked to build a basic counter
- House robberer question was asked

- Basic HR questions

Eligibility

Undergraduate Degree

B.Tech: Chemical Engineering, Civil Engineering, Aerospace Engineering, Computer Science and Engg., Metallurgical and Materials Engineering, Mechanical Engineering, Electrical Engineering

Dual Degree: Aerospace Engineering, Biological Engineering, Chemical Engineering, Civil Engineering, Computer Science and Engineering, Electrical Engineering, Metallurgical and Materials Engineering, Computational Engineering, Cyber Physical Systems, Data Science, Quantum Science & Technology, Robotics

Stipend details:

Currency Type: INR

Stipend Type: Monthly

Amount: 70000

Other information: One week accommodation upon boarding with air tickets To/Fro will be provided.

Quantbox Research

Profile: Core Engineering

Location: Bengaluru/Delhi

Stipend:

- **Currency type:** INR
- **Amount:** 500000 / month
- **Other Facilities:**
 1. **Travel Allowance:** Provided
 2. **Accommodation:** Provided
 3. **Food:** Provided
- **Duration:** 8 weeks (May-July)

About Quantbox Research:

Quantbox Research is a technology-driven proprietary trading firm founded in 2020, specializing in systematic trading and electronic market-making across global financial markets. With a strong emphasis on quantitative research, advanced mathematics, and AI-driven strategies, Quantbox develops high-performance trading algorithms that operate across multiple asset classes and exchanges. The firm is recognized as one of India's top high-frequency trading (HFT) firms and is known for its collaborative work culture, competitive compensation, and international presence, with its headquarters in Singapore.

Job Description:

As a Software Developer in the Core Engineering group, you'll be responsible for designing, developing, and testing in-house low-latency, high-throughput software systems. Your daily tasks will include building exchange connectivity layers, distributed backtesting and simulation platforms capable of processing terabytes of data, and real-time risk management systems. You'll identify and solve complex technical problems, advocate for innovative solutions within your team, and collaborate closely with other developers, quantitative traders, and researchers in a dynamic, cross-functional environment.

Responsibilities:

- Implement high-frequency automated trading systems.
- Optimize trading systems by using networks and systems programming.
- Do Research and development of algorithms to reduce the latency of trading systems.
- Build risk-management and performance-tracking tools.
- Be responsible for modules including research, design, development,

deployment, optimization and support.

Qualifications:

- Completing a bachelor's degree or PhD in Mathematics, Computer Science (CSE), Statistics, Electrical Engineering (EE), or a related field
- Ability to think independently
- Creative approach to problem
- Familiarity with Python and C++
- Open to candidates from CSE, EE, and Mathematics backgrounds

Shortlisting process:

- Resume shortlist
 - Test (Coding)
 - Interview
- [CP rating was also taken into consideration]

CGPA cutoff: 7+

Tests:

- hackerrank based test for checking technical knowledge.
- Contains 3 sections:
 - C++: more like language related stuff.
 - Probability.
 - Cp type: Algorithm based.
- Contains system designing
- It was based almost entirely on topics like data structures and algorithms, probability, OOPS etc.
- 3 hrs test.

GD: No

No. of Interview Rounds: 2

Interviews:

- Probability based questions
- It was more about the C++ stuff:
 - Template meta programming
 - Shade pointer

Suggestions:

- Have the fundamentals of C++ strong, Libraries, all edge cases, etc.
- The test was not just Algorithm based so it tests your knowledge.
- Don't speak more than enough in front of HR.
- Do not stress out, just give your best and do not think about anything else.

- Starting early will give you more time to prepare, but ultimately, the way you're preparing matters more. Even in a short span, one can prepare efficiently.
- Practice tough questions.
- Prepare for Quant questions like probability and riddles.

Preparation material:

- For coding - Leetcode and gfg (refer to cp problems), CodeForces (not that imp. but good to have).
- For probability related questions - 'Heard on the Street', 'Fifty problems in probability', 'Zetamac' (for mental math), 'BrainStellar' etc.

Open for: CSE, EE.

Quantbox Research

Profile: Quantitative Researcher

Location: Bengaluru/Delhi

Stipend:

- **Currency type:** INR
- **Amount:** 500000 / month
- **Other Facilities:**
 1. **Allowance:** Provided
 2. **Accommodation:** Provided
 3. **Travel Food:** Provided
- **Duration:** 8 weeks (May-July)

About Quantbox Research:

Quantbox Research is a technology-driven proprietary trading firm founded in 2020, specializing in systematic trading and electronic market-making across global financial markets. With a strong emphasis on quantitative research, advanced mathematics, and AI-driven strategies, Quantbox develops high-performance trading algorithms that operate across multiple asset classes and exchanges. The firm is recognized as one of India's top high-frequency trading (HFT) firms and is known for its collaborative work culture, competitive compensation, and international presence, with its headquarters in Singapore.

Job Description:

You will be involved in learning and contributing to the development and enhancement of models that maintain our competitive edge in the market. Working closely with traders, software developers, and engineering scientists, you'll participate in researching, testing, and refining our trading algorithms to boost profitability. On a typical day, you'll apply rigorous scientific methods and machine learning techniques to large and diverse datasets, generating valuable insights into market behavior.

Responsibilities:

- Implement high-frequency automated trading systems.
- Optimize trading systems by using networks and systems programming.
- Do Research and development of algorithms to reduce the latency of trading systems.

- Build risk-management and performance-tracking tools.
- Be responsible for modules including research, design, development, deployment, optimization and support

Qualifications:

- Completing a bachelor's degree or PhD in Mathematics, Computer Science (CSE), Statistics, Electrical Engineering (EE), or a related field
- Ability to think independently
- Creative approach to problem solving
- Familiarity with Python and C++
- Open to candidates from CSE, EE, and Mathematics backgrounds

Shortlisting process:

- Resume shortlist
- Test (Coding)
- Interview

[CP rating was also taken into consideration]

CGPA cutoff: 8+

Tests:

- Hacker Rank based test
- It was based almost entirely on topics like data structures and algorithms, probability, OOPS etc.

GD: No

No. of Interview Rounds: 2

Interviews:

- Probability based questions
- CP (Tree based questions)

Suggestions:

- Do not stress out, just give your best and do not think about anything else.
- Starting early will give you more time to prepare, but ultimately, the way you're preparing matters more. Even in a short span, one can prepare efficiently.
- Practice tough questions.
- Prepare for Quant questions like probability and riddles.

Preparation material:

- For coding - Leetcode and gfg (refer to cp problems), CodeForces (not that imp. but good to have).

- For probability related questions - 'Heard on the Street', 'Fifty problems in probability', 'Zetamac' (for mental math), 'BrainStellar' etc.

Open for: CSE, EE, Maths

Quantbox Research

Profile: Quantitative Researcher (Singapore)

Location: Singapore/Hong Kong

Stipend:

- **Currency type:** SGD
- **Amount:** 10000 / month
Extra Bonus: 8000 SGD
- **Other Facilities:**
 4. **Accommodation:** For one week
- **Duration:** 8 weeks (May-July)

About Quantbox Research:

Quantbox Research is a technology-driven proprietary trading firm founded in 2020, specializing in systematic trading and electronic market-making across global financial markets. With a strong emphasis on quantitative research, advanced mathematics, and AI-driven strategies, Quantbox develops high-performance trading algorithms that operate across multiple asset classes and exchanges. The firm is recognized as one of India's top high-frequency trading (HFT) firms and is known for its collaborative work culture, competitive compensation, and international presence, with its headquarters in Singapore.

Job Description:

In this role, you'll collaborate with traders, developers, and engineering scientists to learn, research, and enhance trading algorithms that keep the firm competitive. Your day-to-day work will involve applying scientific methods and machine learning to large datasets, testing and improving models, and generating insights to better understand and predict market behavior, all aimed at increasing trading profitability.

Responsibilities:

- Implement high-frequency automated trading systems.
- Optimize trading systems by using networks and systems programming.
- Do Research and development of algorithms to reduce the latency of trading systems.
- Build risk-management and performance-tracking tools.

- Be responsible for modules including research, design, development, deployment, optimization and support.

Qualifications:

- Completing a bachelor's degree or PhD in Mathematics, Computer Science (CSE), Statistics, Electrical Engineering (EE), or a related field
- Ability to think independently and use creative approaches to problem solving
- Familiarity with Python and C++
- Open to candidates from CSE, EE, and Maths backgrounds

Shortlisting process:

- Resume shortlist
- Test (Coding)
- Interview

[CP rating was also taken into consideration]

CGPA cutoff: 8+

Rubrik

Profile: Software Intern

About:

Rubrik is a cloud data management company focused on security and resilience against cyberattacks. They offer a platform, Rubrik Security Cloud, that helps organizations protect data, monitor for threats, and recover from disruptions, with a particular emphasis on achieving fast recovery times after a breach, according to Rubrik's website. Rubrik's platform is built on a zero-trust architecture and uses machine learning to detect and mitigate risks.

Job Description:

We are looking for a Software Engineer to join our team. We believe in giving engineers responsibility, not tasks. Our goal is to motivate and challenge people to do their best work. To do that, we have a very fluid structure and give people the flexibility to work on projects that they enjoy the most. This develops more capable engineers and keeps everyone engaged and happy.

Responsibilities:

- Design, develop, test, deploy, maintain and improve the software.
- Manage individual projects priorities, deadlines, and deliverables with your technical expertise.
- Identify and solve bottlenecks within our software stack.

About You:

Rubrik Software Engineers are self-starters, driven, and can manage themselves. Bottom line, if you have a limitless drive and like to win, we want to talk to you - come make history!

- Bachelor's or Master's degree or equivalent in computer science or related field.

- Proficiency in one or more general-purpose programming languages like Java, C/C++, Scala, Python.

Shortlisting Process: Resume shortlisting, test

CGPA Cutoff: no explicit cutoff but 8.5+ will be good

GD: No

No of interview rounds: 2 (1 technical + 1 HR)

Interview:

- The Technical Interview had 2 1800-1900 rated questions.
- The HR round is a bit easy. Having some knowledge about the company would help. Asked generic stuff regarding you and your motivation on software.

Test:

- 4 CP styled questions. 2 around 1400-1600 and other 2 1900+.
- Most of the shortlisted candidates could do 2 questions.

Suggestions:

- Doing CP helps a lot.
- Practicing some standard personality questions for the HR round will help.

Preparation Material:

- 1800+ rated problems on codeforces and equivalent.
- DSA sheet.

Open for: B.Tech: Computer Science and Engineering

Dual Degree: Computer Science and Engineering

Stipend: INR 3,00,000 per month.

Food, Accommodation, travel will be taken.

Food Allowance : Will be provided by the office

About Salesforce :

Salesforce is the customer company. It delivers solutions to its customers 3 times a year through its leading CRM(Customer Relationship Management) platform. They develop cloud-based software that empowers businesses to connect with their

customers in innovative ways, helping them discover more prospects, close more deals, and deliver outstanding customer service.

It provides customer relationship management software and applications focused on sales, customer service, marketing automation, analytics, and application development.

Job Description:

As a software engineering intern, you will have the opportunity to contribute immediately as a member of one of our Scrum teams, focusing on one or more aspects of software engineering for future releases. You will be involved in various stages of

the engineering lifecycle, developing tools and features that enable our solutions to reach millions of end users and enterprises who rely on our mission-critical applications and services every day to run their businesses. Additionally, we look

to you to help deliver high-quality software through automated testing and to take ownership of your service in production with real-time monitoring tools and Frameworks.

Responsibilities includes but not limited to :

- Operate within a dynamic work environment to generate software of exceptional quality.
- Collaborate with the development team to design, develop, test and deploy software products.
- Work on creating solutions that easily integrate into large distributed systems, using the latest technology at a remarkable scale and speed.
- Develop well-tuned code that may be included as part of our next software release.
- Contribute to our suite of automated tests and testing infrastructure.
- Contribute to tools and solutions to support and monitor our various cloud services.

Required Skills:

- Strong analytical and problem-solving skills
- Excellent in effectively communicating technical challenges and proposing solutions.
- Skilled in navigating through ambiguous or undefined problems, coupled with the ability to think abstractly
- Experience with programming languages such as Java, C++ or Python
- Knowledge of web development technologies (HTML, CSS, JavaScript) and frameworks (React, Angular, or Vue.js) is a plus.
- Coursework in SQL and relational database concepts
- Strong in Computer Science fundamentals, including object-oriented design, data structures, algorithm development, problem-solving, and complexity analysis.

Selection process:

- Tests
- Shortlisted will be taking their interviews
- One technical interview
- One HR round

Tests:

It was online. Duration is 1hr. The coding assessment included 3-4 questions and was relatively straightforward. The difficulty level ranged from 1100-1800 on Codeforces, covering topics such as sorting, arrays, and trees. They consider your Codeforces rating. The questions were similar to standard LeetCode problems.

Interview:

1st round(Technical):

- The interview process involved two interviewers. Each interviewer asked a competitive programming (CP) question, both of which were of intermediate level.
- The interview consisted of two questions. The first question was easy, while the second one was trickier. Both questions were mostly standard problems from the DSA sheet.
- A question based on an array.

2nd round(HR+technical):

- Had basic level theory questions.
- Resume specific questions.
- Puzzles would be given to solve and it was easy.
- Approach based technical question.
- A tree based question.
- Some Brain stellar questions.
- Some normal HR questions

Preparation Material & strategies:

Test & Interview:

- LeetCode questions
- Strivers DSA Sheet
- Codeforces contest
- CP from Codeforces

HR Interview:

- YouTube videos
- CDC Templates
- Know about the company

Suggestions:

- Take help from seniors as such for resume formatting, resume validation etc
- A resume starting from the 4th semester would be preferable.
- Know your resume through and through.
- Start to do Leetcode and CP questions as soon as possible
- Dedicated time for DSA sheet, Resume and Review of the coursework

Stripe Inc

Profile: Software Engineering Intern

Stipend: 200000 INR

CGPA cut-off: No CGPA cut-off

Branch specialisation: Open to all branches

Job location & about Stripe, Inc:

Stripe is a financial infrastructure platform for businesses. Millions of companies—from the world's largest enterprises to the most ambitious startups—use Stripe to accept payments, grow their revenue, and accelerate new business opportunities. Our mission is to increase the GDP of the internet, and we have a staggering amount of work ahead. That means you have an unprecedented opportunity to put the global economy within everyone's reach while doing the most important work of your career.

Responsibilities

- Write software that will be used in production, and has meaningful impact to Stripe
- Give and receive technical feedback through code reviews or design discussions
- Collaborate with other engineers and cross-functional stakeholders to proactively seek and incorporate feedback
- Learn quickly by asking great questions, by working with your intern manager and teammates effectively, and by communicating the status of your work clearly

Minimum requirements

- A strong fundamental understanding of computer science through pursuit of a Bachelor's, Master's, or PhD degree in computer science, math, or a related discipline
- Some experience and familiarity with programming, either through side projects or classwork. We work mostly in Java, Ruby, JavaScript, Scala, and Go. We believe new programming languages can be learned if the fundamentals and general knowledge are present

- Experience from previous internships or other multi-person projects, including open source contributions, that demonstrate evaluating and receiving feedback from mentors, peers, and stakeholders
- Ability to learn unfamiliar systems and form an understanding of those systems, through independent research and working with a

Skills that helped:

- Understanding of GitHub and familiarity with how different interfaces work
- C, C++, Python
- DSA and coding skills
- Understanding of graphs and derivatives
- Understanding of OOPs

Materials and courses that help:

- LeetCode
- Codeforces
- Ultimate DSA sheet
- YouTube resources on DSA
- Mathematics course on Probability (MA2040)
- W3 schools
- Geeks for geeks

Recruitment Process:

After resume shortlisting,

Test:

Online assessment: This was completely hard coding — about 300 lines of code — and there was only one question, which was on DSA. There was a time limit of one hour, and the student had to complete it in the minimum time possible. The aim was to check how thorough you are with basic syntax, operations, and logical intuition. Any language like C, C++, or Python that the student is confident in is fine, but Python is preferred.

Screening round (Around 1 hour):

This is more on the practical side — an online interview over Zoom, conducted by a full-time software engineer from the company. A platform link will be shared (most likely sites like HackerRank, which is a live coding platform). It will be monitored, and the candidate will be given one hour to solve problems. Try to solve as many problems as you can.

Interview round (Day 1):

Round 1 –

Software development round (around 45 mins)

The company will send an email asking which language you are comfortable with. They prefer Java or Python since many of the questions will be easier to code in those languages. This also helps them assign an interviewer who is proficient in that language.

Disclaimer: You can use Google to search, but not AI tools, as it will be monitored.

Suggestions: First 10 mins – ask questions and understand the problem. It's important to fully understand and ask valid questions. The interviewer is there to guide you along the process and ensure you're heading in the right direction. You should also provide frequent input about what you're coding and why.

Round 2 – 1 hour

Try to solve as many questions as possible. This will be a pure DSA round.

Questions will be asked progressively, increasing in difficulty. Coding will be done in a GitHub interface.

Suggestions: The email will mention all necessary requirements and interfaces to be familiar with. Make sure you go through them and understand how they work.

Round 3 – HR-based

This round checks communication skills. Be very thorough with your resume and be prepared to discuss whatever is written, especially projects you've done. Be ready to talk about your strengths and weaknesses.

Personal suggestions:

- Focus on your resume and highlight individual contributions
- Do projects and keep upskilling yourself
- Do's: Try to be confident, be careful about what you say, be polite, keep the interviewer in the loop, and speak openly with them. The interviewer is there to guide you.

Tower Research Capital

Profile: Quantitative Research & Development Intern

About Tower:

Tower Research Capital is a global leader in the field of quantitative and high-frequency trading. We build best-in-class technology, and deploy a range of automated algorithmic strategies on asset classes and markets across the globe.

Job description:

Location: London, UK; Duration: 8 weeks

As a Quantitative Research and Development intern, you will actively work on expanding and improving our trading on markets around the world. You will draw upon your computer science, mathematical, and analytical abilities to expand the capabilities of our infrastructure, improve our existing strategies, and develop new quantitative models. Typical internship projects include:

- Creating tools and libraries for managing, processing and analyzing historical and live market data
- Helping improve the design, implementation and performance of our high-frequency trading platform, which collects live market data from and disseminates orders to exchanges around the world
- Improving our trading simulations to allow for accurate backtest of strategies
- Building risk-management and performance-tracking tools
- Researching novel machine learning algorithms and techniques, and applying them to our domain.

Qualifications:

- A strong background in data structures, algorithms, and programming in C++ and/or Python
- Knowledge of statistical inference and machine learning algorithms a plus
- Working knowledge of Linux, shell scripting, and basic computer architecture
- Strong problem-solving abilities
- Self-motivated, able to find answers but also ask the next questions
- Able to manage multiple tasks in a fast-paced environment
- Good verbal and written communication skills in English

Departments in BTech for the role are:

- Computer Science and Engineering

- Electrical Engineering
- Engineering Physics

Departments in Dual Degree eligible for the role are:

- Computer Science and Engineering
- Electrical Engineering

Tests:

Number of tests: 1 coding test

Difficulty level: Manageable

Contents: Had standard probability questions. MCQs contained topics from basics of OS, architecture, and was a bit more on the theory side of it. Knowing the basics of DBMS and OS, you could do well.

The coding part had 3 questions - first two were relatively easy, third one was a bit difficult.

Also had a debugging question.

Interviews:

Number of rounds: 2 or 3

All interviews were technical, none HR

Contents of all the rounds:

1. C++ OOPS related concepts, such as keywords, virtual functions etc
2. Basics of OS, Compilers, Computer architecture, Hardware - rapid fire
3. Also a bit on processes and threads
4. Probability questions, and aptitude puzzles - resemblance to brainstellar problems.
5. CP question also asked:
Hard side implementation of a string algorithm, question was based on palindromes
6. DSA related questions asked:
 - a. Bring stuff from memory to cache - how to design such an implementation
 - b. Code up a persistent stack.

GDs: Not conducted

Points to be noted:

1. It is beneficial to have a project related to what the company does.
2. Knowledgeable to a minimum basic extent in a wide variety of topics.
3. Might have given importance to CGPA

Preparation material:

1. Puzzles from brainstellar.
2. Going through any book on modern C++
3. DSA sheet

4. CP practice important
5. Fifty challenging problems in probability.

Suggestions:

1. Clarity on a variety of topics is good.
2. DSA practice is important.
3. Being thorough with the courses learnt is important
4. Try looking through DBMS and OS
5. Reading up on C++ concepts.

Stipend:

Amount: 12500 GBP

Stipend type: monthly

Other information: 7500 joining bonus + 15000 Other benefits

Uber

Profile : Software Engg

Location: Bangalore/Hyderabad

Stipend:

- **Currency type:** INR
- **Amount:** 177000 / month (inclusive of Accommodation)+ Uber Credits + To and fro air tickets.

About Uber:

Uber Technologies, Inc. is a leading American multinational company headquartered in San Francisco, California, best known for its ride-hailing platform. Since its founding in 2009, Uber has transformed urban mobility and expanded into related sectors such as food delivery (Uber Eats), courier services, and freight transport. The company operates in around 70 countries and 15,000 cities, coordinating an average of 28 million trips per day and boasting over 150 million monthly active users and 6 million active drivers and couriers.

Job Description:

As an Uber Intern, you'll play a hands-on role in enhancing both riders and drivers by working on impactful projects that improve the app and service, all while being part of an ambitious team dedicated to transforming urban transportation. Beyond our core work, you'll also have the chance to build lasting connections with other interns and mentors through various summer activities, making it a rewarding and dynamic internship experience

Qualifications and Desired Skills

- Actively pursuing a B.Tech or Integrated Dual Degree (anticipated graduation in 2022) in Computer Science, Electronics Eng, Electrical Engineering, Mechanical or Mathematical Sciences or related fields
- Demonstrated software engineering experience through previous internships, work experience, coding competitions, and/or publications
- Programming experience one or more application or systems languages (Go, Python, Ruby, Java, C/C++, etc)
- Interest in building tools/infrastructure
- A desire to be part of a team that delivers impactful results every day
- A commitment to writing understandable, maintainable, and reusable software
- An innate desire to deliver and a strong sense of accountability for your work

- Willingness to learn new languages and methodologies

Shortlisting Process: Test, Interview

CGPA Cutoff: 8+

Test :

- 3 questions in the test(1 hour). Students were free to choose the language.
- First question was to convert a 100 bit binary no to base 6.
- Second question was essentially to find the number of subsequences of an array of length ($n \leq 60$) whose gcd $\neq 1$ which can be solved using dynamic programming
- Third was a straightforward knapsack problem.

GD: No

No of interview rounds - 2 (technical) + 1 (hr)

Interview:

- Both the technical rounds were coding based.
- They were asked to code live and questions were asked based on them.
- Topics like dynamic programming, binary trees were tested on.

Suggestions:

- Try to do more live contests as it helps with time constraints.
- Go prepared for the HR round.
- Do company based previous year questions.
- Have meaningful projects in your resume.
- Get a good hold over DSA, probability, statistics, and math.
- For the interview specifically- just keep thinking out loud to the interviewer, u don't have to be 100% right in the approach but if u keep explaining what you're thinking of doing, they'll correct you and give u a lot of hints
- So be as interactive as possible and show confidence

Preparation Material:

- Codeforces and Codechef contests
- Solved past questions asked by companies from gfg,leetcode,interviewbit

Open for:

- Btech: All
- Dual Degree: All

Wells Fargo

Profile- Quantitative Analytics

Internship Location: Pan India

About -

Wells Fargo & Company (NYSE: WFC) is a diversified, community-based financial services company with \$2.0 trillion in assets. Founded in 1852 and headquartered in San Francisco, Wells Fargo provides banking, insurance, investments, mortgage, and consumer and commercial finance through more than 8,500 locations, 13,000 ATMs, the internet (wellsfargo.com) and mobile banking, and has offices in 42 countries and territories to support customers who conduct business in the global economy. With approximately 273,000 team members, Wells Fargo serves one in three households in the United States. Wells Fargo & Company was ranked No. 25 on Fortune's 2017 rankings of America's largest corporations. Wells Fargo's vision is to satisfy our customers' financial needs and help them succeed financially. News, insights and perspectives from Wells Fargo are also available at Wells Fargo Stories. Wells Fargo India & the Philippines (I&P) enables global talent capabilities for Wells Fargo Bank NA., by supporting Wells Fargo's business lines and staff functions across Technology, Business Services, Risk Services and Knowledge Services. I&P operates in Hyderabad, Bengaluru, and Chennai in India and in Manila, Philippines. Learn more about I&P at our International Careers website.

About QAP:

The rotational Quantitative Analytics Program (QAP) is designed to provide you with the opportunity to gain comprehensive professional and industry experience that prepares you to develop, implement, calibrate, and validate various analytical models. Validating or developing models for different uses under the direction of experienced team members according to the track assigned:

The Capital Markets Track deals with the mathematical models for pricing, hedging and risking complex financial instruments. Wells Fargo trading portfolios include products in all traded asset classes such as credit, commodity, Equity, FX Rate, Mortgages, and Asset-Backed Finance.

The Risk Analytics & Decision Science Track deals with the statistical, econometric, and machine-learning/AI models for a variety of applications, including loss and revenue forecasting, credit decisions, financial crimes, fair lending, operational risks, and analysis of unstructured data such as text and audio.

Upon successful completion of the program, participants will be permanently placed in one of Wells Fargo's model development or model validation groups:

- Artificial Intelligence Machine Learning Model Development
- Traded Products Model Development
- Risk Modeling Group
- Market and Counterparty Risk Analytics

- Mortgage Model Development
- Corporate Model Risk
- Commercial Banking Model Development
- Consumer Modeling

Job description:

Participates in a formal internship program with a duration of at least 2 months. Internship includes performing various assignments to become familiar with the organization and gain basic work experience. Work assignments are augmented by classroom training, self-study assignments, workshops, networking and/or other events. The Modeling activities at Wells Fargo are organized into Centers of Excellence (CoEs). Corporate Model Risk is responsible for model validation of model risk assessment while other CoEs are responsible for model development.

1. Artificial Intelligence Machine Learning Model Development (Risk Analytics & Decision Science Track)
2. Commercial Banking Model Development (Risk Analytics & Decision Science Track)
3. Consumer Modeling (Risk Analytics & Decision Science Track)
4. Corporate Model Risk (Both Tracks)
5. Market and Counterparty Risk Analytics (Capital Markets Track)
6. Mortgage Model Development (Capital Markets Track)
7. Retail Investing & Financial Advice (Risk Analytics & Decision Science Track)
8. Risk Modeling Group (Risk Analytics & Decision Science Track)
9. Traded Products Model Development (Capital Markets Track)

Responsibilities

- Use Python, R, C++, SAS, SQL or other programming languages as well as mathematical/statistical packages for model development and validation.
- Perform mathematical model development and validation (risk assessment) under the direction of experienced team members.
- Produce required documentation to evidence model development or validation
- Understand business needs and provide possible solutions through clear verbal and written communications to management and fellow team members.
- Stay up to speed on industry challenges and new and innovative modeling techniques used across Wells Fargo to solve business problems or enhance business capabilities.

- Participate in model related projects for varying purposes, methodologies, and relevant lines of business. Required Qualification

- Minimum Masters/Ph.D. in a quantitative field such as applied math, statistics, engineering, physics, accounting, finance, economics, econometrics, computer sciences, or business/social and behavioral sciences with a quantitative emphasis. Desired Qualifications

- Enrolled in a Master's or PhD program in: Statistics, Applied or Computational Mathematics, Computer Science, Economics, Physics, Quantitative Finance, Operations Research, Data Science, Engineering or related quantitative field or a related quantitative field

- Excellent computer programming skills and use of statistical software packages such as Python, R, SAS, SQL, Spark, Java, C/C#/C++ and Big Data platforms.

- Strong verbal, written communication, and interpersonal skills

- For the Capital Markets Track: Experience and demonstrated knowledge in mathematical and numerical methods including Monte Carlo methods, differential calculus, linear algebra, applied probability, statistics, Stochastic Calculus, Numerical Solutions to PDE/ODE/SDE and hands-on experience of working on quantitative finance research. Exposure to basic concepts specific to various asset classes (Rates, Foreign Exchange, Commodities, Equity, Credit) for financial derivatives will be an added advantage.

- For the Risk Analytics & Decision Science Track: Experience and demonstrated first-hand knowledge in several areas from analytical modelling, including, data analysis, statistical modeling, machine learning/AI models, data management, and computing. Specific topics/techniques relevant to this area include Multilinear regression, Error-correction models, GLM, Nonparametric regression methods, time series modeling, hypothesis testing, machine learning techniques (supervised/unsupervised), NLP, Bayesian/MCMC methods, Filtering methods (Kalman, etc.), Markov-Switching models, etc. Exposure to basics of Credit Risk, Scorecard Modelling framework, Macroeconomic Stress Testing, CRM analytics, Fraud Analytics, etc., would be an added advantage.

Open to-
Dual Degree- All

Post Graduate Degree
M.Tech / M.S- All

CGPA Eligibility - 7.5 and above

Stipend - 1,30,000 monthly (rupees)

ABinBev

Profile : Summer Intern

Job Description:

- Work on a live project in one of the core business functions : Sales, Marketing, Supply Chain, Technology & Analytics, Finance, Legal, People, or Corporate Affairs.
- Collaborate closely with experienced teams to tackle real-world business challenges.
- Gain access to leadership mentors and structured learning resources.
- Make a tangible impact from Day 1 with ownership of project deliverables.
- Ideal for those who are curious, ambitious, and excited to explore cross-functional roles in a fast-paced consumer goods company.

Responsibilities :

- Will be tasked with certain projects, with guides and mentors to help.
- Hustle culture, but the learning curve is very rewarding.
- Analyse the beer industry both global and domestic to formulate plans and strategies.
- As the 4th biggest FMCG company globally, the projects are highly educational and impactful.

Shortlisting Process :

Consists of a test, but very random test with intuition based questions.

Interview Process :

Interview consisted of 3 rounds.

Round 1 : was a GD round, a very important round in selection criteria. Prior knowledge of the beer industry helps a lot.

Round 2 : was a business simulation round, like product ideation in line with ABinBev's line of working, and considering supply chain and other factors.

Round 3 : HR round with usual HR questions like interests, hobbies and also resume based round with questions on resume points, past internships etc.

Preparation Material & Suggestions :

- Knowledge about the beer industry globally and in India is essential.
- Get to know how a GD works, how to carry the group forward and what points to raise in what topics.
- Very intuition based interview rounds.
- PoRs help in showing past experience in handling difficult situations.
- Good communication skills.

Stipend :

₹ 1,35,000 for 2 months. Includes 5 star hotel accommodation for the tenure.

Open for :

All.

Depository Trust and Clearing Corporation

Profile : Intern for Quantitative Finance

Job Description:

- Work on innovative, real-world projects in the financial markets space.
- Collaborate closely with cross-functional teams to solve business and tech problems.
- Participate in hands-on workshops focused on skill-building and career development.
- Gain direct access to senior leadership through structured sessions.
- Engage in team volunteering activities and join internal interest-based groups.
- Receive continuous guidance through a dedicated summer mentor.

Responsibilities :

- Grasp the behavior of existing quantitative models, perform scenario analyses, and develop prototypes for new scenarios.
- Generate performance metrics and analytics to validate model behavior.
- Establish performance and monitoring controls to aid in model evaluation.
- Collaborate across business units to conduct model testing.

Essential Skills :

- Company focused on risk analysis in the financial sector
- Has a big role in the western and US markets.
- So basic knowledge of capital markets is essential.
- Very good knowledge in SQL and Python expected.
- Good coding skills.

Shortlisting Process :

- Consisted of an offline test in the office campus.
- Had 1 ML question, 1 basic SQL question and 4 basic statistics questions.
- The ML question was to build an ML model on spot.

Interview Process :

- The interview happened in the office as well.
- Only single round, questions based on project done included in resume.
- Little bit of basic finance knowledge was also tested.

Preparation Material & Suggestions :

- Andrew NG's ML course on Coursera was hugely helpful.
- OB course on WebDev for SQL knowledge.
- LeetCode and YouTube for coding knowledge and practice is recommended.
- Be thorough with ML to be able to recollect libraries during the test on spot.
- Be thorough with projects too.

Stipend :

8 Week internship with ₹ 50,000 per month.

Open for :

All

Other information :

Work from the office, but the office provides cab, food and has world class facilities.

Nation with Nammo

Profile : Summer Associate

Job Description:

- A political consultancy firm that works on high-stakes problems in governance, policy, and electioneering—beyond textbooks and simulations.
- Contribute meaningfully to the political ecosystem through hands-on projects with real impact.
- Learn directly from experts who have led major electoral campaigns and policy initiatives.
- Make decisions on financial and policy planning catering to the central government.

Responsibilities :

- Prioritise Impact: Optimise for impact above everything else
- Structured Problem Solving: Tackle complex situations through effective and structured problem solving and out-of-the-box thinking
- Teamwork: Contribute to the strong team ethic and work towards the success of the entire team

Essential Skills :

- Effective Communication: Possess strong written and verbal communication skills - both individually and in a group setting
- Initiative: Adapt to dynamic and ambiguous situations with a clear bias for action
- Leadership Skills: Display the requisite leadership qualities to take ideas forward
- Strong Ethics: Possess uncompromising ethical principles
- Academic Excellence: Combine an impressive academic record with strong technical skills.
- Little Quantitative Skills and modeling knowledge.
- Ability to break down problems into small fragments and stakeholders analysis.

Shortlisting Process :

Direct Resume shortlist to interviews. No Tests.

Interview Process :

There were 3 rounds of interviews.

Round 1 : Mostly guesstimate questions, may pertain to certain cases.

Round 2 : Case analysis question with the interviewer.

Round 3 : If previous 2 rounds were satisfactory its a purely HR round, else it involves guesstimates and some unconventional questions too.

Preparation Material & Suggestions :

- Suggested to look at some political cases for preparation.
- Have some political and financial knowledge.
- Refer case books of IITM, IITB, SRCC etc.
- Watch YouTube videos on case analysis for prep.
- Having a well rounded and diverse resume helps in shortlists.
- Decent CGPA, PoRs with bottom to top (Vol to Head) and / or having published papers help a lot in this regard.

Stipend :

8 Week internship with ₹ 50,000 per month, ₹1.25 Lakhs for other grants like food, travel, room rent. On site not remote.

Open for :

All

Other information :

NA

Nation with Nammo

Profile : Summer Decision Scientist

Job Description:

- Political Consultancy firm that works at the intersection of data science and political strategy.
- Analyze real-time electoral data to inform strategies that influence millions.
- Build predictive models to forecast election outcomes.
- Create impactful visualizations and dashboards for senior decision-makers.
- Engage with granular electoral data (booth, constituency, state-level) to decode voter behavior.
- Directly contribute to nation-building through data-driven political insights.
- High-impact, fast-paced environment with a young and driven team.

Responsibilities :

- System Preparation and Output Generation: Develop systems and outputs to address specific business-related questions posed by stakeholders. This includes considering the most effective type of analysis, reporting/visualization formats, and understanding the behavioral aspects of the electoral problem statement to aid stakeholders in making informed decisions.
- Research and Statistical Model Development: Engage in the research, development, and refinement of statistical models, focusing on the application of domain-specific data. This includes analyzing demographic and electoral data at various levels (Booth, Constituency, State, etc.) to derive meaningful insights.
- Data Analysis and Reporting: Regularly produce detailed reports and analyses, utilizing system queries to gather data, performing data mining, identifying trends, and developing forecasts.
- Cross-Functional Collaboration: Work closely with business, product, and technology teams to implement projects that leverage data-driven insights.
- Data Custodianship: Act as the custodian of organizational data, ensuring its maintenance and effective utilization across multiple teams, while upholding the highest standards of data integrity.

Essential Skills :

- Political Consultancy firm, so little politics knowledge of home state.
- AI and ML knowledge.

- Communication skills

Shortlisting Process :

- An offline pen and paper test.
- One question was to write code on paper, no computer access.
- Some aptitude based questions.
- Some Data Analysis questions.

Interview Process :

3 rounds of interviews.

Round 1 : Resume based round. Questions were asked on projects included in resume , combined with a HR bout of questions.

Round 2 : Heavily ML based interview with deep theoretical questioning.

Round 3 : Solely HR round, questions on candidates professional backgrounds, reason for choosing company etc.

Preparation Material & Suggestions :

- OB Course on MLT helped a lot in theoretical knowledge.
- Have an ML project to put in your resume.

Stipend :

6 week intern, ₹ 50,000 per month.

Open for :

All

Other information :

1st week remote work, then daily office.

Twilio

Profile : Software Engineering Intern

Job Description:

As a Software Engineer Intern you will experience the following -

- Be a Software Engineer, not just an "intern".
- Ship many different projects during your summer.
- Learn from passionate engineers at Twilio who solve problems in distributed computing, real-time DSP (audio processing), virtualization performance, distributed messaging, buses and more.
- You will be given responsibility for core features and services that ship to our users.
- You will be expected to embrace these challenges, learn fast and deliver great results.
- You will bring a willingness to learn and grow and we will reciprocate with ample opportunity to do just that, in a friendly, fun and exciting startup environment!
- Learn to develop beautiful and profitable applications.
- Demonstrate consistent improvement in your coding skills, issue-tracking and source control systems, and agile development mentality.

Essential Skills :

- Very good knowledge in DSA.
